Daily-planet wordpress theme designed by link Coded by link1 , link2 , link3

Welcome to Dailyplanet

Daily-planet is a free premium News/Magazine wordpress theme. It is designed and constructed in a way to power up your wordpress blog into a fully functional News or Magazine CMS. Unlike regular blog themes, magazine themes will not just work right out of the box on your blog. There are various components of this theme which you will have to adjust according to your site.

The following setup guide will take you through the steps in customizing daily planet for your wordpress site. Go through them step by step. This guide is meant to help even the one with least experience working with wordpress. So if you find some of the steps in the guide too trivial just skip to next, coz that's probably not for you.

1. Upload the theme and plugin

The download pack will contain 2 folders and this setup guide once you extract it.

Upload the Dailyplanet folder into your themes directory of the wordpress installation.

Upload the popularity-contest folder to your plugins directory.

2. Enable the plugin

Login to your admin panel and get to the plugins section and activate the popularity contest plugin.

3. Enable the Theme.

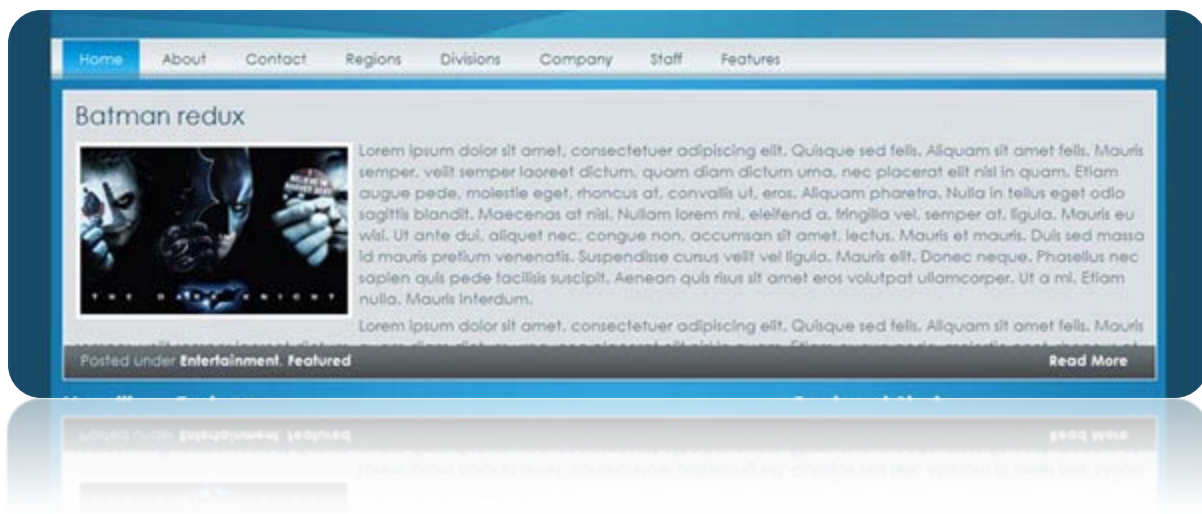

Go to the design section of your admin panel and activate the dailyplanet theme.

4. Theme Options

In the design section of your admin panel, you will find the Dailyplanet options tab. Under that you will find the options page which controls the settings of your theme. We will go by them one by one.

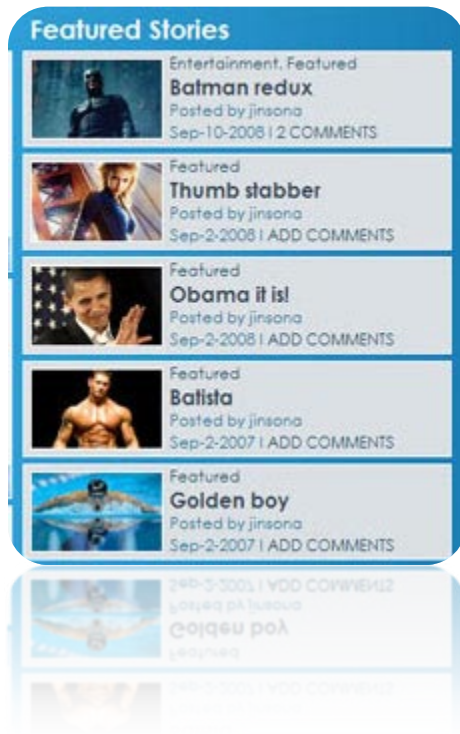

1. Top Featured Post

This is the area on the theme which you see on the image. From the option page you can select any category. The theme will display the latest post from that category as featured post.

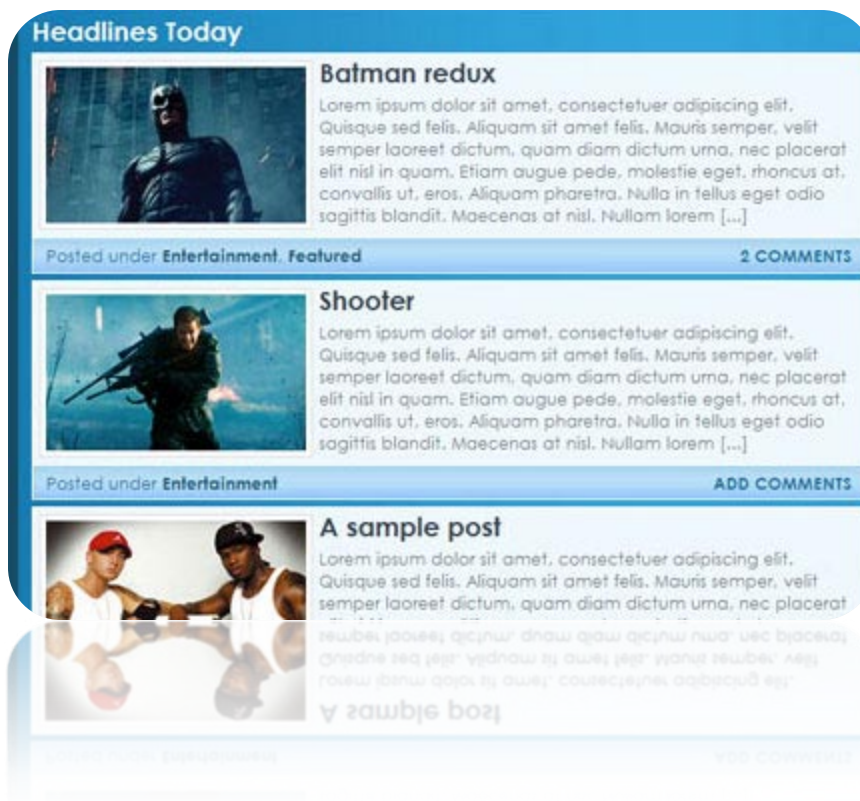

2. Featured stories.

This is the area on the theme which you see on the image. From the option page you can select any category to display posts here. You have the option to select number of stories to be displayed.

3. Headlines Today

This is the area on the theme which you see on the image. Select 6 different categories to display 6 miniposts on the home page.

4. Featured Video

Select the category where you post your videos. This will display the latest video posted in that category.

5. Various Headlines section

This is the area on the theme which you see on the image. This is a tabbed content area which a list shows latest posts from 6 different categories. You have the option to select the categories and the number of recent post displayed under each category.

5. Thumbnails display

As you may have already noticed, the home page of the theme displays thumbnails on miniposts and featured stories. This is a custom field driven system. The image you want to display here has to be entered via custom fields.

For this to work, you have to go to **> Settings > Miscellaneous** and **UNCHECK** the organize uploads into month- and year-based folders.

Miscellaneous Settings

Uploading

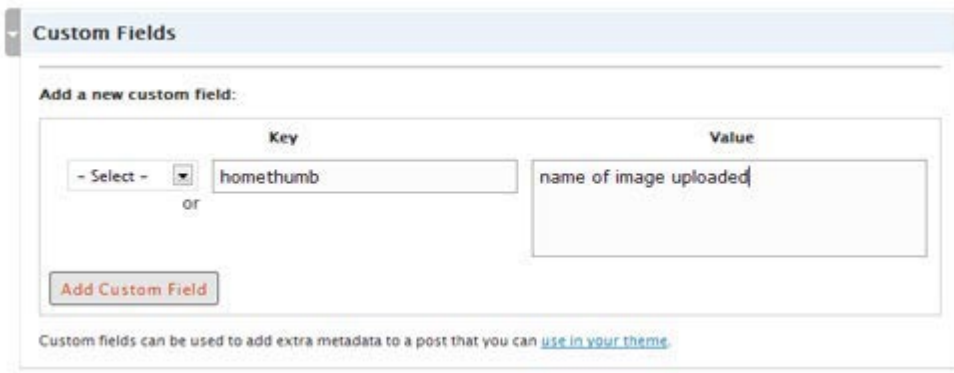

Store uploads in this folder	<input type="text" value="wp-content/uploads"/> <small>Default is wp-content/uploads</small>
Full URL path to files (optional)	<input type="text"/>
<input type="checkbox"/> Organize my uploads into month- and year-based folders	

Now to enable thumbnails on your posts you have to

1. Go to **Admin panel > Write post**
2. Give post title , and write down the content.
3. Select **Add media > Add an image > Upload your choice of image (size 200px X 120 px)**
4. Scroll down to the Custom field area and set the key name as **homethumb** (case sensitive) and enter the **name** of the image you uploaded in the **value field**.

Make sure you enter the name only in the value field, not with .jpg extension.

5. Then add the custom field to the post.

The image shows the 'Custom Fields' meta-box in WordPress. It has a title bar 'Custom Fields' with a minus icon. Below it, the text 'Add a new custom field:' is followed by a form. The form is divided into two columns: 'Key' and 'Value'. In the 'Key' column, there is a dropdown menu with '- Select -' and a small square icon, and a text input field containing 'homethumb'. Below the dropdown is the word 'or'. In the 'Value' column, there is a large text area containing 'name of image uploaded'. At the bottom left of the form is a button labeled 'Add Custom Field'. Below the form, a note states: 'Custom fields can be used to add extra metadata to a post that you can [use in your theme](#).'

Key	Value
<div>- Select - <input type="checkbox"/></div> <div>homethumb</div>	<div>name of image uploaded</div>

[Add Custom Field](#)

Custom fields can be used to add extra metadata to a post that you can [use in your theme](#).

The images entered via this method will only appear on where it is specified to be. They will not appear on single post/page view. You can embed images on posts as you would normally do to have them shown on posts/pages etc.

That's about it. If you have any other support related issues visit me at **wpfreethemes.com** and let me know.
