Cornwall Electric

A FORTIS ONTARIO Company

A MESSAGE TO OUR CUSTOMERS

Cornwall Electric trims tree limbs away from overhead power lines in order to achieve two critical objectives:

1. Public Safety
2. Reliability of Electric Service

Many service outages and interruptions are caused by tree limbs which, when affected by wind or ice, fall into power lines causing damage to wires, short circuits and other problems. This creates potential danger for the homeowner and his/her property, danger that can be avoided by not planting tall-growing trees under or near electric wires, and by routine tree trimming.

Cornwall Electric utilizes tree trimmers trained in proper tree trimming techniques around energized lines. The trees are cleared the distance required to create a sufficient air barrier around the wires to reduce branch contacts due to icing and wind. Generally, the branches are trimmed back to the parent limb on the tree. This practice allows the pruning cuts to "heal" more rapidly, reducing the chances of insect and disease damage, and promotes a healthier growing of branches that are directed away from the power lines.
