

## Human Is Mammal Or Monkey, Genetic Code Defined As Key Of Determination Of Group Or By Do Shape And Structure, Me-Myself(Atep Nurdjaman™) Ask You Answer With Your Knowledge In Depth, You Defined Now

Author: Atep Nurdjaman, DR™

*Researcher-Independent for revealed unarranged theory in fields of organic chemistry and biology, 2007 in month of January and the date 23 in do doing for title up*

The doubt of you and me considering the classification of human in world of biology (biology field) has been go and through for centuries, and our conclusion is our goal to get clear of the specific class for human has been cut by many researcher in around the world. How about the independency of our type, that make you think we are alone as living form? Or we try hide something for get reasonable got but all of matters make crush successively. Do you understand?, Do are we human or monkey, do wrong opinion, do wrong judgment, I think we should discuss for get all of information considering the clear decision. Human is mammal is not my consideration, human is monkey is not my choice, so what,....., the ET. My consideration is, human, is human as standalone of type of living form. I found many of living form that not yet discover and defined, for example: I found the creature who fast move just like zip movement the size maybe size of bacteria but we can saw the light that produced by this creature the light just like fluorescence, I call the creature as FluoroZipMove CreatureAN, we can found this creature in location of light when bright, and also in middle of street in daylight precise at noon usually and in clear weather, this creature have been not identified by someone and put in class who available now, this fact should to becoming as consideration for all of researcher that in this world so many secret that not yet revealed by you and me. Return to the discuss-talk about human, I think, we should determined as standalone of type of living form, why, because human is not mammal, why, has genetic code different comparing the genetic code of human and also in shape and structure. Based on genetic code the different between human and monkey definitely wide in perspective of me, why, why we compared between of.....

The fact that I explained aboved will bring you go to somewhere and heading to some conclusion that is human is standalone of type of living form. The specific of human as standalone of type of living form is in part of the different in shape and structure and next supported by do fact genetic code. It is un fair if we defined human has relationship in term heritage with monkey just like tell by do Charles Darwin with famous theory considering missing link, until now we only can guess by do follow term of him, what it is the missing link, If something can not do connect the connectivity should considering theres no correlation, and then you all should determined your perspective and defined based on your knowledge, don't live the theory who has been influence researchers in around the world still go heading for prove and still influence generate to generate, I think global conspiracy, meanwhile you has been prove by your sophisticated knowledge the mistakes by do previous researcher, you should claim just like I do now. In this scientific work paper, I claim the theory of Charles Darwin considering missing link theory as wrong theory, human is human not part of monkey or reverse.

Based on my explanation aboved I claim that human should put in specific of group (see my new grouping considering living form in my next scientific work paper).

**Keywords:** FluoroZipMove CreatureAN, human, Charles Darwin, missing link, group

### Introduction

Note: Introduction and summary-conclusion same in explanation

### References

1. The Best Perspective of Me(Atep Nurdjaman™) Considering Genetic Field And Comparative Anatomy Field And Also Evolution Filed In Term I am As Biologist. 2007. Used for revealed the mistakes of group of human in classification and also to claim the wrong and mistakes of Charles Darwin Theory considering missing link theory, the correlation broke link between human and monkeys. The changing term will bring you and me to heading the clear perspective in term in science knowledge and religion considering position human in classification.
2. You as my references, each in field definitely, in term you are expert in field of Genetic, expert in field of Comparative Anatomy, and expert in field of Evolution.
