

PDAssiDrc

[Home](#) | [Download](#)

Welcome to **PDAssiDrc** (PDAssi Dynamic Registration Code) homepage. This is an Open Source Palm OS® application that can be used as a program skeleton (**cm4p** was also written using this template) to build professional PocketC applications with the usual Palm look-and-feel.

PDAssiDrc's source contains functions that a PocketC programmer can use to include PDAssi.de's Dynamic Registration Model management into its own software. PDAssi.de's **Dynamic Registration model** generates custom codes based both on customer information identifier (C/DUI) and a RPN string the developer chooses when developing software. With these informations, PDAssi.de's site generates unique unlock code the final customer receives via email at purchase time to unlock the software.

PDAssiDrc was written using the [PocketC](#) compiler and the user interface library [CControls](#). You can download the latest version following [this link](#). Any comment is appreciated; please feel free to send it to my [e-mail](#).
