SKILLS AND CONCEPTS

OBJECTIVES AND EXAMPLES

Lesson 5-1 Identify angles that are coterminal with a given angle.

- If a 585° angle is in standard position, determine a coterminal angle that is between 0° and 360°. State the quadrant in which the terminal side lies.

  First, determine the number of complete rotations (k) by dividing 585 by 360.

  $\frac{585}{360} = 1.625$

  Use $\alpha + 360k°$ to find the value of α.

  $\alpha + 360(1)° = 585°$

  $\alpha = 225°$

  The coterminal angle (α) is 225°. Its terminal side lies in the third quadrant.
