

EMF Solutions Canada

EMF Protection Solutions for You and Your Family

EMF Home Inspections

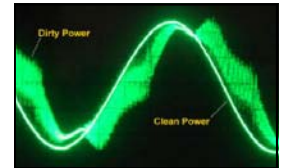

Protect your Family with an EMF Home Inspection and reduce your family's in-home EMF exposure by up to 95%

If you're concerned that your home environment may be contaminated with 'Dirty Electricity' and other EMF energy - proven to adversely affect the health of your family - it may be wise to have your home inspected. At the same time you can take the steps necessary to better understand this dangerous, insidious environmental toxin.

Using a proprietary methodology designed in conjunction with some of North America's leading EMF scientists and experts, the consultants from **EMF Solutions Canada** can survey for, and then remediate much of the harmful EMF energy in your home, thus reducing your ongoing exposure to this toxic pollutant.

The True Science of EMF Protection

During our EMF Home Inspection we'll measure for:

Electromagnetic Fields - Using a Gauss meter, clamp meters and other scientific instruments, we can find EMFs in your electrical system that are primarily caused by old, damaged or poorly installed wiring that can create dangerous "hot spots" in a home. Plumbing current, wiring and grounding errors are more common than one would expect and entirely correctable.

High-voltage lines, power lines and common items such as transformers, laptops and computers, CRT monitors, energy-efficient lighting and power cords can also produce strong electric and magnetic fields. Let us show you how to minimize the risk that these devices pose to you and your family.

Radio Frequency (RF) - This type of EMF is produced primarily by radio transmitters, wireless devices and cell towers and travels through the air. We'll measure your home for RF being emitted from the new, popular "always on" DECT cordless phones, which are now banned from schools in parts of Europe. We'll also look for additional EMF sources including nearby wireless networks and PDAs.

Dirty Electricity - Using a special Microsurge Meter we can measure for a high frequency, "biologically active" EMF called 'Dirty Electricity' that may be contaminating your home's electrical wiring. Dangerous 'Dirty Electricity' has been on the rise as we continue to add electronics, energy efficient lighting and electrical devices to our household grids.

Many things in a modern home create this type of high frequency EMF, including dimmer switches, computers, treadmills, TVs and entertainment systems, energy-efficient lighting and virtually all modern electronic devices. The EMF created by 'Dirty Electricity' radiates several feet into a room, even when the electricity is not being used to power your devices. We are capacitively coupled to this energy simply by being in a contaminated building.

EMF Home Inspections

The best way to reduce the amount of 'Dirty Electricity' in your home involves the use of new, innovative filters. When installed properly, these special filters have been shown to dramatically reduce much of the dangerous electromagnetic energy, much of it in the Radio Frequency range, that's now being emitted from electrical systems, along with the electrical devices and appliances in many of our modern homes.

Graham-Stetzer Filters have been proven in a number of scientific tests to greatly reduce a person's exposure to this type of potent EMF. Many who have installed them in their homes are showing remarkable improvements in their overall health.

These "capacitors" attenuate much (4 kHz to 100 kHz completely, as tested by Health Canada) of the dangerous high frequency energy riding on your home's wires. Installing Graham-Stetzer filters has been proven in numerous well-conducted scientific studies to relieve or reduce symptoms related to Electrical Hypersensitivity (EHS) while preventing exposure to this dangerous energy.

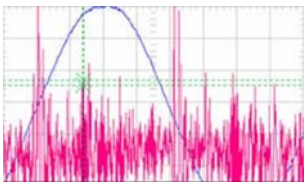

It takes a number, usually about 20, strategically placed filters to effectively "clean-up" pollution from the 'Dirty Electricity' in an average home. Homes with additional features including low-voltage lighting, dimmer switches, electronic equipment such as microwaves, multiple computers, printers and plasma TVs, typically require more filters as these devices put more dangerous high frequency energy back onto the electrical wires where, in turn, it is radiated throughout the home.

We install these specialized filters at "no extra charge" for you during our EMF Home Inspections, or you can purchase them and install them yourself with help from our experts.

Children with asthma in Wisconsin improved dramatically when 'Dirty Electricity' was removed from their schools using Graham-Stetzer filters. Professor Magda Havas achieved ground breaking research results.

A complete EMF Consultation

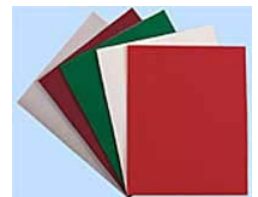

Understanding EMFs can be difficult. After your EMF Home Inspection, our consultants will supply you with the latest scientific data. They'll explain to you how EMFs are produced, how they impact your health and how you can avoid exposure. Plus, you'll also receive a comprehensive list of important common-sense suggestions to help reduce your family's exposure to this new dangerous, environmental toxin while at home, school and work.

After your EMF Home Inspection our knowledgeable **EMF Solutions Canada** consultants will discuss with you the options available to lower the levels of dangerous 'Dirty Electricity', RF emissions and other EMFs in your residential living environment.

A Detailed EMF Report

You'll also receive a detailed report showing you where all these dangerous levels of EMF "energy" are located in your home - so you may practice "prudent avoidance" and take immediate action, if required.

Other corrective measures may be recommended, where electricians, or other outside contractors, or the utility company may be needed to be called in to deal with the problem. All of these areas will be covered in your comprehensive EMF Home Inspection report.

Protect Your Family. Call 416-653-0300 or email us at Dirty.Electricity@yahoo.com and book an appointment to have your home inspected for harmful EMFs.
