

EMF Protection Products for You and Your Family

Dr. Gauss (Gauss Master)

Hand-held, lightweight and durable, with an easy to read scale (0-10 mG), and audio signal. It can also measure between 0.1 -1mG by holding in the button on the side of the unit. A Great meter for demonstrating the presence of dangerous EMFs.

This meter measures the level of EMF magnetic field radiation from power lines, computers, kitchen appliances, and more. The easy to read scale, unique built-in audio signal and auto shut-off make it simple to use and a great way to find hidden sources of EMF frequency magnetic fields.

Includes instructions on how to perform a proper survey of your home, office, or school playground. Most experts agree that chronic exposure to more than 2.5 milli-Gauss is inadvisable. This meter will show you which areas are above or below 2.5 milli-Gauss in the 50 - 60 Hz frequency.

Size: 130 x 63 x 26 mm

Weight: 110 grams (without battery)

Power: One 9V PP3 type battery (not included)

Display Range: 0-10mG and 0-0.1mG

Calibrated at 50-60 Hz.
