RF3 Cell phone “Air- Tube” headset

Proven Cell Phone Protection

The RF3 is safest, anti-radiation mobile phone hands-free headset available today with an SAR of only 0.009 W/Kg. Most cell phones put over 1,000 times more radiation directly into the head. By using a flexible hollow tube to transmit good quality sound from a tiny speaker located at a distance from the head, Air-Tube keeps both the magnetic fields from the phone's speaker and the microwave radiation away from the head. Neither the tube nor the comfortable earpiece contains any electronic components. There is no way for electromagnetic fields to travel up the line into your ear. This unit offers a very unique state-of-the-art sound chamber and comfortable earpiece hook, convertible to fit either ear, with an adjustable support which minimizes ear fatigue. Speak into the component located at the lower end of the air-tube. This headset can be used on most cell phones and cordless phones, all those with a 2.5 mm universal headphone jack. Other sizes require an adapter.
