# 1 Objective

The goal of this document is to enumerate the different use cases for the Distributed Resume Management System, or Distrimon. The use cases listed here will be described in further detail in separate documents, one per use case.

## 2 Actors

There are three main actors who participate in the use cases. They are:

### 2.1 Job Applicant

The person using the Distrimon system to search and apply for jobs. We do not distinguish between a job applicant accessing Distrimon through the central website or the website of a Partner Employer.

### 2.2 Partner Employer

An employer who has subscribed to the Distrimon service, or a representative of such an employer. The representative could be a human being (human resources staff, hiring manager) or a software system (in-house hiring management program).

### 2.3 Non-partner Employer

An employer who has not subscribed to the Distrimon service, or a representative of such an employer. The representative will almost always be human, as we do not provide a software interface for non-partner employers to use.

## 3 Use Cases

The following use cases have been identified during the initial requirements gathering.

- R.1 Login to system
- R.2 Create employer account
- R.3 Search general resume pool
- R.4 Search company resume pool
- R.5 Search resume pool
- R.6 Manage job postings
- R.7 Manage resumes for a job posting
- R.8 Create applicant account
- R.9 Manage personal resumes
- R.10 Submit resume at employer website
- R.11 Search job postings at central website
- R.12 Search job postings at company website
- R.13 Search job postings

## 4 Use Case Diagram

The use case diagram in Figure 1 (next page) shows the relationships between the actors and the different use cases.
