

## PERSONAL HARMONIZERS

The Personal Harmonizer from the Centre for Implosion Research is a portable device for boosting the immune system and also providing personal protection from electromagnetic radiation. It is especially beneficial to users of mobile phones, but will protect from any kind of electromagnetic pollution that fills our environment. It reduces electromagnetic as well as geopathic stress.

earthHeal conducts experiments and offers field trials to those wishing to test these devices in a variety of real world applications and conditions. We have many testimonials and reports confirming that the Personal Harmonizer strengthens the body's own etheric energy. The different versions are all made from copper tubing filled with "imploded" water. The combination of very high quality water contained within a spiral (vortex) form is what makes them work the way they do. Therefore, any version, whether copper, silver, gold, or platinum-plated will have the same basic effect. The different metals and metal combinations have their own intrinsic frequencies, which add to the effect of the devices.

When choosing the right metal or metals (some users choose more than one metal and find that combining more than one Personal Harmonizer has a far greater effect for them), we generally advise to go with your intuition. If you have no affinity to a particular metal, go with the metal you like best.

Each device is supplied with a cloth cord (do not use a metal chain) and gift box and makes a beautiful amulet to wear, or the device may be carried or placed anywhere its beneficial effects are desired. A small adhesive pad of tape strip can fix the device to any surface. These devices and other imploded water-filled, personal amulets and body wear are available from earthHeal.
