When it comes to hiring an employee many people are inclined to employ the inexperienced ones because of lower salary, while others prefer to pay more and take advantage of having a more professional staff. Either case has its advantages but in my opinion hiring an expert always is worth paying a little bit more.

First of all in many factories unskilled workers may cause harms to themselves or others or at least bring the company some sort of financial lost. For instance if we want to employ someone to work with a large, heavy press machine in a car factory, there would be real dangers threatening the unskilled worker. He might loose some fingers in a moment of negligence or hurt himself because of not knowing how to handle the machine. Therefore, you as an employer will have to do a lot of insurance paperwork if you are not taken to court due to being absolutely irresponsible to put a newcomer behind a press machine. Or if you want to employ a waitress for a restaurant and find the lowest-paid one this can take many costumers out of your hand, unsatisfied with the service. So you may loose a lot just trying to save a little.

Another disadvantage in employing unskilled workers is that you have to pay them much more as soon as they learn the job, and you do not know how much they may ask for one day. You may have to pay excessively higher then and you might not be able to find any other qualified applicants any longer. For example my father wanted to employ an electrician for his factory. He employed a high school graduate 3 years ago and since then he has been having trouble teaching the boy how to do things. Now that the boy has learned every detail of the work he always complains of the low salary and says he will leave soon and my father is unable to find anybody else to hire with a fair wage.

Thus, I believe you have better employ the best one and do not worry about the cost. It will pay back soon and you will take advantage of initiatives he will make in order to improve your company. In addition you will have to be worried all the time about what he is doing. So employ Sherlock Holms, pay a little extra, relax and wait until he solves the problem.

Done in 30 minutes without further revision.
