*Many teachers assign homework to students every day. DO you think that daily homework is necessary for students? Use specific reasons and details to support your answer.*

When I studied in high school I used to complain of daily assignments all the time. I saw no use in such boring and time-consuming duty. I preferred to have a little more extra time just to discover things on my own. I thought it was not true to force someone do something even if it was useful for him. But today I do not believe that the teachers should let the children decide on what to do to be successful in a course. Now I find it useful to assign weekly works to even university students who are usually more capable of deciding whether something is necessary for them.

I thing being used to do something on a regular daily basis is essential. If you want to learn a subject by heart you have to spend a little of your time on it every day. I believe every thing, not only studying, can be done perfectly just if you work on it regularly. For example if you want to learn to play an instrument you have to practice every day. No matter how much you rehearse each time. For example I have been playing the Setar, a traditional stringed instrument. But because I have always given priority to my studies as a university student, I have never practiced on a regular basis. I go to music class every Wednesday and each Tuesday I have to rush home and start practicing the part I have to deliver the next day. Although I put several hours each Tuesday but the result is seldom acceptable. Recently I have discovered that if I practice every day for just an hour but continue it through the whole week it would be far much better and the mystery is in regular, continuous work.

The other reason for assigning daily work is that, it as been proven that learning is a complex process which takes time to develop. If you encounter a new subject, the first days afterward you will be just thinking of the whole idea and the details would not be very clear to you. Just if you think about the same idea for a rather long time, you will be able to judge about the truth of it and it will then become a part of your longtime memory. Therefore, if the teacher leaves the careless students to themselves they will forget the class work in a few days if they do not throw it away as soon as they get of class.

So I think the best way to make students be adapted to a system of regular work and also make them learn scientific material by heart is to make them work on it everyday and discover new unknown things about it themselves. And it is achieved if the assignments are innovative amazing works to do not just copying some mundane things into their notebooks.
