

Don't Forget!

When dividing integers, remember these rules.

1. If two integers have the same sign,
the quotient will be positive.

$$35 \div 5 = 7 \qquad -35 \div -5 = 7$$

2. If two integers have different signs,
the quotient will be negative.

$$35 \div -5 = -7 \qquad -35 \div 5 = -7$$

Divide. Then use your answers and their matching letters to write the answer to the riddle at the bottom of the page. (You won't use all the answers and letters.)
