

NOTE: This version was created so children could do everything start to finish. With the "punched" version it is highly recommended an adult prepunch the holes.

NONPUNCHED M&M's Minis Tube First Aid Kit or Treasure Keeper
design by Miss Sherry ~ inspired by film canister versions

Materials:

Clean M&M's Minis Tube with plastic wrapper removed
3 lengths of plastic string (we used 6", 7" and 8" lengths)
Assorted pony beads
Letter beads for person's name or initials
Clip keychain

Supplies:

Scissors

1. Grasp both ends of single length of plastic string and pull the ends together to make the length even on both sides. Knot the length of string around the tube on the left side. Slide the string to the top of the tube.
2. Grasp both ends of another single length of plastic string and pull the ends together to make the length even on both sides. Knot the length of string around the tube on the right side. Slide the string to the top of the tube just under the previous knotted string.
3. If using letter beads, string them on the last single length of plastic string. Grasp both ends of the plastic string and pull the ends together to make the length even on both sides. Knot the length of string around the tube on the back (hinge) side; make sure the letter beads are on the front of the tube.

Holding the ends together, string an assortment of pony beads onto the ends.

4. Tightly tie the length of plastic string you just finished stringing bead on to the clip keychain.

5. Decorate the tube with small stickers or permanent markers.
