

Auto WateringTM For Tropical Garden

What is Auto Watering ?

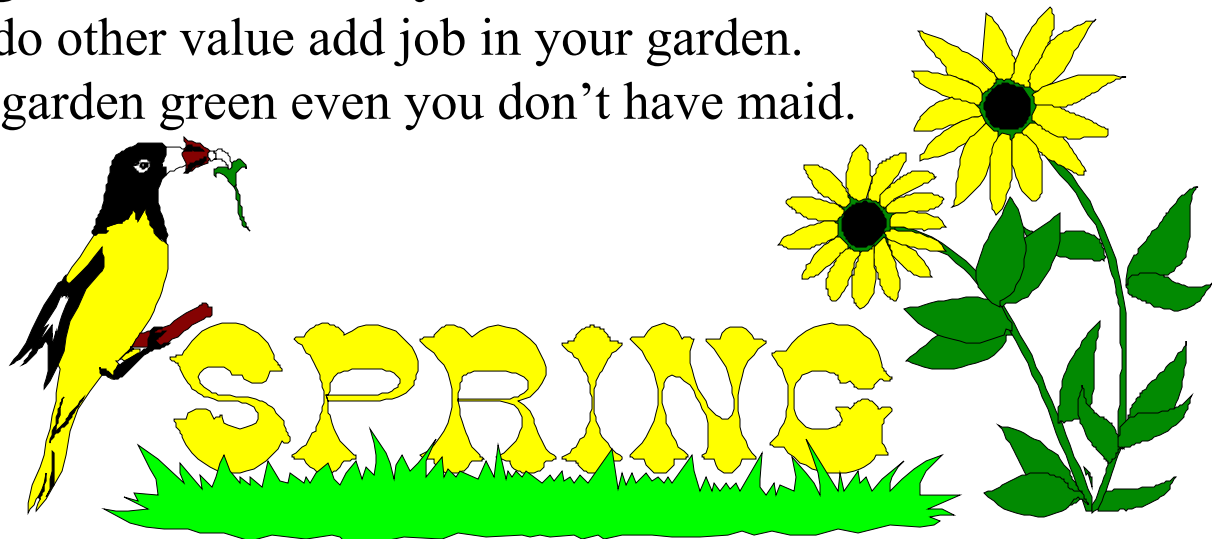

Auto Watering is a system that automatically waters your garden at a preset frequency and time daily. In our busy schedule and the hot tropical climate, this is a very useful tool, just set-up and it will help to keep your garden in full bloom continually.

How does it work?

A water valve will be activated at preset time and water will be channel via UV resistance piping to a sprinkler and nozzle system to spray water on to the lawn or chosen greenery. Specific plants that requires more water can be separately watered via miniature tubing.

Why is it advantage to used this system.

1. Save your time to do other value add job in your garden.
2. Always keep your garden green even you don't have maid.
3. Maintenance free.
