

# Faraway Star

Oh star, far far away...  
Your light visible from  
Light years away...  
Oh star, how great you must be!  
If your light is bright enough  
To be seen by me!

Oh star, far far away...  
Your shine cannot be spliced by  
darkness...  
The power of your heat  
Can never be frozen...  
Your life never ending, never beginning...

Oh star, far far away...  
How can I see you up close?  
An astronomer I know can bring me to you...  
I just need to ask him first.  
Then when he's ready, I'll come to you  
And bask in your everlasting light...
