## **HARDWARE POSTER**

Your job is to prepare a poster that shows a variety of computer hardware devices.

These devices should be categorized into the functions of a computer system (input, output, storage, processing and control). You could also include a communication device

Your poster should show a minimum of eight devices with at least one item from each of the four groups. Your poster must have a title and all pictures must be correctly labeled as to what they are and what their function is.

You should do a sample layout before you paste or write anything so that you are sure the poster will be attractive and complete. Arrange the pictures attractively on a sheet of bristol board. Include your name, the teachers name, the course code and your section on the back of the bristol board.

Your poster will be evaluated using the rubric on the back of this sheet.

Have fun!!
