

RECOMMENDATIONS

In view of different problems identified and presented during the conference following recommendation were made:

1. Scientific knowledge should be disseminated through all possible means to educate the growers.
2. Legislation of nursery raising to produce virus/disease free and true to type plants.
3. Induction of sweet oranges in the citrus industry and relegate the impression of mono-varietal culture.
4. To promote breeding programme to generate some cvs. of high quality and of local importance and adoptability.
5. Inducing growers to follow the recommendations of the department regarding orchard layout and management.
6. Put a special emphasis on plant protection aspect of orchard production.
7. Initiate studies to minimize post harvest loss and thus increase the hidden harvest.
8. Improvement in grading, packing and processing for export should be encouraged
