All rights reserved. No part of this brochure may be reproduced, stored in a database or retrieval system, transmitted, or distributed in any form or by any means, electronic, mechanical, photocopying, recording, or otherwise, without the prior written permission from the author or a person legally authorized to act on his behalf. From the obligation of getting such a written permission are only released those who would like to prepare a single copy of this monograph for their personal use oriented towards the increase of their knowledge and who fulfil the condition that they will not use the copy prepared for any professional purpose or for accomplishing material gains, and also that they copy the entire brochure - including the title page, all items, all illustrations, and all enclosures.

Date of the latest update of the web page presented in this brochure is provided above in the top-left corner. (Note that in case of having access to several copies of this brochure, it is recommended to read the copy which has the latest date of amendment.)

This PDF brochure publishes the text of the web page authored by Dr Eng. Jan Pająk, indicated in the title of it. In turn the author's web pages are forms of fast reporting to the readers results of scientific research accomplished by the author of this brochure. The author is aware, that this research, and the results, are unique, as no-one in the entire world undertook earlier research of topics elaborated in this brochure. Therefore ideas which this brochure presents are the intellectual property of the author of this brochure. All ideas, theories, inventions, discoveries, explanations, descriptions, etc., published here, which have documentary or evidential value, are presented accordingly to standards applicable for scientific publications (reports). A special attention the author has given to the requirement of repetitiveness, i.e. that on the basis of this brochure any professional scientist or hobby investigator who would like to verify, repeat, or extend the author's research should be able to recreate his work and arrive at the same or very similar results and conclusions.

This brochure is another one from a series of similar brochures in PDF, offered free of charges to interested readers through the totaliztic web page named [text 11.htm](#) - which disseminates PDF versions of most significant and most widely read web pages by the author. The topic of this brochure is represented also in the newest [monograph \[1/5\]](#) with following editorial details:

Pająk J.: "Advanced Magnetic Devices",  
Monograph, Wellington, New Zealand, 2007, 5th edition,  
in 18 volumes, ISBN 978-1-877458-01-9.

Contact addresses to the author valid in 2013 – i.e. during the preparation of this brochure:

"Knowledge is responsibility." By some verdict of the fate it was me to whom was granted the difficult honour of discovering the phenomenon of telekinesis released technically, and also the honour of inventing devices which implement this phenomenon - of the type of "telekinetic cells", or "telekinetic magnocrafts". (I discovered lately, that an electronic circuit shockingly similar to the "telekinetic cell" of my invention, was supplying in electricity not long ago the so-called "crystal radios". It was because of this circuit, that the "crystal radios" worked perfectly although they did not have any battery nor any other external energy supply.) Thus I am fully aware that by the same verdict of the fate, it is also me who bears the responsibility for the most beneficial for our civilisation directing of consequences that result from these my discoveries, inventions, and findings. This is even more important, because already now I am able to encompass intellectually various implications that result from these facts. Especially I am able to predict already, that similarly to every other phenomenon, also the technical version of telekinesis introduces the potential for

creating various consequences, which - if these slip out of control, may turn to be very disadvantageous for people and for natural environment with the elapse of time. I am also aware already now, that in order humanity can maintain a control over these consequences, it is absolutely necessary to establish on Earth the "telekinesis free zone". Therefore, on the power of authority which the fate invested in me by making me the discoverer and the inventor of phenomena of telekinesis and telekinetic devices, herewith I declare to be the "Telekinesis Free Zone" (i.e. "TFZ") the entire area of New Zealand in which I live and which I love, as well as the area of nearby Australia and Tasmania, and also the area of Antarctic which is so important for the rest of our planet. Simultaneously I oblige morally all inhabitants of these areas, as well as people living outside of these areas, that for the good of entire our civilisation they direct their effort into pedantic and patient observing also these difficult, requiring sacrifices, and highly inconvenient obligations which may result from the title of establishing this zone.

Declared by Dr Jan Pajak

Wellington, New Zealand, 23 September 2005.

---

## **Part A: Introductory information of this web page:**

### **#A1. What are goals of this web page:**

This web page summarises the most vital information about the "telekinesis free zone" (TFZ).

### **#A2. Let us start to learn from mistakes committed by previous generations:**

Even a most stupid animal, once it "burns its tail", will omit other fires until the end of life. On the other hand the followers of the Darwin's Theory of Evolution for a long time claim, that us people should price themselves as being the most intelligent animals that populate the Earth. In spite of this, during over 60 years which I already lived on the Earth until the time of writing this item, I noted that people are inclined to symbolically "burn their tails" tens of times, and still learn nothing from that experience. For example, already since I was a small boy, I remember noisy news items that just another "accident" with crude oil took place in the ocean, and that it causes a disaster to the fauna and flora from the surrounding areas. But the humanity as a whole still did NOT worked out the more safe ways of extracting and transporting crude oil. What even worse, in the meantime it introduced to the use the immensely devastating for the natural environment, the so-called "**fracking**". In the result, in 2010 took place the most catastrophic "accident" with crude oil that so-far affected the USA - for details see any news bulletin from the period after 20 April 2010, or e.g. see the article "Monster slick" from page A23 of the New Zealand newspaper [Weekend Herald](#), issue dated on Saturday, June 12, 2010 - which contains a summary on that slick. Almost identical situation is with nuclear energy (see an "accident" in Fukushima, Japan, described in item #M1.1 from the web page [telekinetics.htm](#)), nuclear bombs, chemicals, pollution of the environment, ozone layer, warming of climate, extinction of rare animals, new medicines, antibiotics, genetic engineering, industry, wars, religions, ideologies, etc., etc. Wherever we look, people in the manner of most stubborn in the entire animal

world refuse to learn from the past mistakes. So, although there is a very small chance for such a time to ever arrive, that people begin to take any notice of "voices of reasoning", still herewith I am making available this web page. After all, one should start somewhere, while my research and discoveries on technical telekinesis provide the humanity with the longest so-far advanced warning about dangers of this phenomenon. Let us hope, that this time people who are to make decisions about the dissemination of devices which generate technical telekinesis, instead of the to-date following their greed and money, finally begin to take notice also of the good of people and start to consider of what I am warning here about, and what I suggest to do as a simplest form of precaution.

---

## Part #B: Explanations of the terminology for the "telekinesis free zone" (TFZ):

### #B1. What is "technical telekinesis"?

The name "technical telekinesis" is attributed to a phenomenon which is a technical version of popularly known natural phenomenon called "telekinesis", "psychokinesis", or "levitation". This phenomenon depends on causing relocations objects without acting on these objects with any physical force.

In the sense of principles of operation, **technical telekinesis in an exact reversal of the phenomenon of friction**. In a similar manner as friction spontaneously converts motion into heat, this technical telekinesis spontaneously converts heats into motion. Therefore it provides a physical principle for constructing numerous technical devices, the operation of which depends on generating useful motion at the cost of thermal energy spontaneously extracted from the surroundings of these devices. (Expressing this in other words, the operation of devices which work on principles of technical telekinesis causes the generation of useful energy of motion. This includes also the generation of motion of electrons - means the generation of electric energy. It is linked with the simultaneous absorption of thermal energy contained in the environment of these devices, which (absorption causes the cooling of the environment of these devices.)

The release of technical telekinesis depends on acceleration or deceleration of force lines of magnetic field. The so-called "telekinetic pull" created during this acceleration or deceleration acts upon all objects which are contained inside of the force lines of magnetic field that are accelerated or decelerated. This pull is created no matter what is the composition, consistency, material, or physical dimensions of these objects.

Further information regarding [technical telekinesis](#) is available on the web pages concerning the [Concept of Dipolar Gravity](#), and also web pages devoted to the presentation of this extraordinary phenomenon, e.g. pages

[telekinesis.htm](#), or [telekinetics.htm](#). Furthermore, the presentation of the phenomenon of telekinesis is also contained in subsection H6.1 from volume 4 of monograph [1/4], and the entire chapter L from volume 10 of monograph [1/4]. (Free copies of monograph [1/4] can be downloaded from this web page via "Menu 4".)

The phenomenon of telekinesis is connected with another phenomenon of the wide consequences for the natural environment. This phenomenon is the "permanent **telekinetisation** of substances". All substances which are subjected to the action of this unique "telekinetic field" (i.e. the appropriately accelerated or decelerated magnetic field) are telekinetised in a permanent manner. In turn depending on what character this permanent telekinetisation displays (i.e. whether this is the telekinetisation of the type "axial", "transverse", "torsional", "rotational", etc.), substances which display them become beneficial for living organisms, or kill such organisms. More information about permanent telekinetisation, versions of it, and attributes of it, is presented in subsection H8.1 from volume 4 of monograph [1/4], and also in chapter NB from volume 11 of [monograph \[1/4\]](#).

## #B2. What is "telekinesis free zone" (TFZ)?

The "Telekinesis Free Zone", or "TFZ", is a geographical area which is **protected against all consequences of telekinetic pollution of the natural environment**. In other words, it is an area of land, air, and water, in the boundaries of which there is no release of the phenomenon of technical telekinesis nor permanent telekinetisation of substances contained in there. Practically this means that within such "telekinesis free zone" no-one is going to build, own, nor used, any technical devices which are to release the phenomenon of technical telekinesis. Furthermore, over this area no vehicles are going to fly or land, the propulsion of which is going to work on any principle utilising the phenomenon of technical telekinesis.

At this point it is worth to notice, that via this web page I declared just such a "telekinesis free zone" over the area of New Zealand, Australia (with Tasmania), and Antarctic, in the borders that these islands and countries occupied at the time of preparation of this declaration, means on 23 September 2005.

From the history of various zones established on our planet it is known jolly well, that in case of establishing any of them, always people appear who are going to liquidate it. So it is not difficult to predict that in the future also huge pressure is going to appear to not implement the "telekinesis free zone" declared on this web page. Therefore, **herewith I impose a moral obligation at all producers, distributors, and users of telekinetic devices, to personally reassure, that in spite of all possible pressures, the existence of the "telekinesis free zone" is implemented by them with an iron consequence**. In order to assist them in implementation of this difficult task, I indicate here an illustrative example of the evil which could be avoided on Earth, of only at the

appropriate time people introduced on Earth and implemented consequently a "pesticides free zone", an "antibiotics free zone", or a "genetic engineering free zone". (Please notice that such zones still can be established in the future on the area of the "telekinesis free zone" declared here.)

For the guardians who are to implement this zone in real life I am appointing all inhabitants of our planet. Every inhabitant of Earth who in future is going to work with telekinesis in any possible way, herewith I impose a moral duty to use all means and manners available to him or her, to not allow the technical telekinesis pollute the natural environment in the zone indicated here.

### **#B3. Why the Earth needs such a "telekinesis free zone" (TFZ)?**

The main reason for which there is the necessity to establish on Earth the "telekinesis free zone" is protecting humanity against the repetition of the same error which our civilisation committed previously by failing to establish e.g. a "pesticides free zone", an "antibiotics free zone", a "genetic engineering free zone", etc.

Our civilisation had opportunity to learn a countless number of times, that there is no phenomenon in the universe, which would have exclusively good, or exclusively bad, consequences. For example, eating chocolate is good in sense of taste and energy which it provides, but is also bad in sense of consequences for our teeth, inducing the tendencies for diabetics, or influence on obesity of the society. Similarly is with e.g. 24-hour opening of shops (i.e. throughout the entire night). It is good to have such a shop nearby, in order to be able to make shopping when in the middle of night e.g. we run out of beer. But it is not good to work in such a shop because of the lack of sleep, and also because of exposure to attacks of all sorts of night criminals. Telekinesis is NOT an exception from this rule. As a phenomenon it will turn a saviour of humanity in a whole number of applications, for example in generation of free energy, in providing people with principles of an easy and fast transport, in inducing more effective farming, or in building telekinetic healing devices. Simultaneously, it is also going to cause an array of undesirable consequences described in item #B4 of this web page, such as telekinetic pollution of the environment, mutation of giants (especially if the telekinesis is present at the moment of conception), or emission of murderous emission of radiesthesia popularly called the "negative green" (this generation occurs only in some version of permanent telekinetisation of substances from the environment).

In order to comprehensively and exactly establish the influence of technical telekinesis on people and on natural environment, it is vital to establish on Earth a comparison area of some sort, in which this phenomenon is not induced on purpose. Only then humanity will be able to weight all undesirable (and desirable) consequences of technical telekinesis, and with the elapse of time learn how to control these consequences.

## #B4. What kinds of threats introduces the phenomenon of technical telekinesis:

If someone analyses the phenomenon of technical telekinesis, his or her eyes are first hit by desirable consequences that it introduces for humanity. For example, it provides a non-threatening for the natural environment, and clean, method of generation of unlimited amounts of free energy. It also allows for the construction of an interstellar spaceship, called the telekinetic magnocraft. It allows to construct healing machines. It allows to multiply the efficiency of farming production. Etc., etc.

But independently from all these desirable consequences, the large scale utilisation of technical telekinesis is to introduce also an entire array of threats. The comprehensive description of these threats is contained in subsection K2.3.2 from volume 10 of monograph [1/4]. But for the scientific exactitude most vital amongst them are going to be repeated on this web page. Here they are:

**(#1) Abuse telekinesis for military purposes.** An example of the most obvious negative consequences of the construction of telekinetic devices, especially the telekinetic free energy devices, on which everyone immediately concentrates most of the attention, is opening a way to the abuse of this device for military purposes. It is not difficult to imagine the military advantage that one side would gain over the other, if its army would have aeroplanes that have no limits to the range of their flights, submarines that do not need to emerge to the surface, tanks that do not require fuel, torpedoes that are capable of crossing entire oceans, missiles (e.g. telekinetic equivalents of present "cruise missiles") that are capable of reaching every distant target and the range of which is not limited by the amount of fuel, etc.

**(#2) Telekinetic pollution of the natural environment.** Technical telekinesis causes the so-called "permanent telekinetisation" of the surrounding substances. In turn this permanent telekinetisation, depending on the kind and character (i.e. whether it is the telekinetisation of the type "axial", "transverse", "torsional", "rotational", etc.), can cause a whole array of undesirable consequences. For example, substances which display such a telekinetisation can be either beneficial or destructive for health of living organisms. The presence of telekinesis during the conception may cause the mutation of human giants. Some versions of telekinesis emit unhealthy vibrations of radiesthesia called "negative green" (i.e. the same which is emitted by underground water veins, and by so-called "Swiss net" or "geopathic net"). Etc., etc.

**(#3) The pollution of our atmosphere with huge amounts of undesirable, highly-active ozone.** Some telekinetic free energy devices, e.g. the "telekinetic influenzmaschine" generate significant amounts of ozone. Thus the effect of their work would be a reversal of the present situation with the "ozone hole" over Antarctic. Apart from such obvious results, as holding back the photosynthesis in vegetation, killing some needed micro-organisms, this could also accelerate the ageing process in people, intensify the corrosion of metals, rapidly wearing out and tearing of solid objects, undermining the processes that keep people healthy,

etc. In the case of especially intensive emission of ozone, it could even happen that the very life-giving conditions of our planet can be undermined. However, there is a solution for this problem of ozone. It is to use only free energy devices such as the telekinetic cell, which do not produce ozone.

**(#4) The cooling of the Earth's climate.** There are certain chemical reactions which bind heat of our atmosphere and convert this heat into various flammable substances. Examples of products obtained during such heat-binding reactions are coal and crude oil. In the event of the wide utilization of telekinetic free energy devices, the production of this type of substances would rapidly grow. The reasons for this would be as follows:

- In order to boost food production, farmers would heat the soil (after all, the energy would be for free), thus converting in this way the thermal energy from our atmosphere into raw organic matter.

- The free energy would encourage heating of water. This would be done not only for industrial purposes, and in homes (e.g. in swimming pools with flowing water), but also in natural water reservoirs (e.g. for farming tropical fish species). The subsequent flow of such warmed water to seas would cause the growth of plankton and organisms which would bound the atmospheric heat into their organic matter.

- To increase the fertility of the soil, most of the organic matter currently burnt, would then be recycled into the soil (to produce humus).

- In order to decrease pollution of the air, and also because of the inconvenience of present combustion devices, the burning of fossil fuels and organic matter (wood) would be stopped.

The lack of a need for conventional energy sources would eliminate the present mining and burning of fossil fuels which release significant amounts of thermal energy bound in such substances as coal and oil.

In this manner the widespread use of telekinetic free energy devices would cause the subsequent binding and elimination of increasingly large amounts of heat from our atmosphere, thus gradually cooling the climate of Earth. This cooling in turn would disturb the ecological equilibrium, bringing about the return of the ice age with all its cataclysmic consequences (e.g. geological changes).

**(#5) Changes in the economy of the world.** The other equally negative implication connected with the introduction of these machines to wide use, is the creation of an unexpected and rapid economic advantage that a country, or a block of countries, having such machine as a first, would gain over the rest of the world. As the cost of energy can constitute even up to 80% of the total cost of some products, having energy for free would allow the winning country to eliminate all its competition and in the matter of a few years to become the world's leading economic power and monopoly.

**(#6) The triggering of the explosion of unneeded production.** Presently the production of any goods is limited by the costs of energy required for their manufacture. However, when energy will be for free, producers will be limited only by the absorption of the market. In order to increase this absorption, they will apply various tricks, for example:

- The production of a disposable packaging which requires more energy and materials than the product itself.

- Convincing the population (via advertisements, fashion, social role models,

new customs) of needs which in fact do not exist. An example of how this is already being done is the multiplying of various commercially oriented events (e.g. fathers day, mothers day, valentine's day) and then putting social pressures on people forcing them to purchase various unneeded goods made especially for these occasions.

- The intensification of production which serves exclusively for entertainment, shows, advertisements.

- The production of increasingly large proportion of disposable goods prepared for one use only.

In turn such marketing strategy will quickly convert our planet into a large rubbish dump overflowing with used packaging, disposable products, one-time entertainment goods, etc.

**(#7) The increase of poorness of the so-called "third world" and the lengthening of the distance between rich and poor countries.** In the present circumstances of expensive energy, the production of many goods at the spot is not profitable and it is more economic to bring these goods from other countries. Because of this bringing, poor countries are still able to offer to the rest of world at least a part of the resources that they have. But in situation, when energy is going to be for free, many rich countries will not be prepared to put us with the lack of reliability, with constant problems, with dangers, and with inconvenience of the trade with poor countries. Thus, they are rather going to produce the required goods on their own soil. For example, instead of importing bananas from dangerous and unreliable "banana republics", it become much easier to build heated glasshouses on the own soil and to produce bananas in own country with a higher efficiency, higher success ratio, and in a manner that fulfils all standards and requirements of the local market.

**(#8) The fall and disintegration of the present concepts of worth, quality, good versus bad, etc.** Because of the to-date high costs of the production of some goods, our civilization established the system of values in which such attributes as permanency, reliability, unchangeability, productivity, diligence, are appreciated the most. However, in the case of decrease in costs of production, these old values will inevitably be replaced by new ones, more compatible with human nature. Thus with the elapse of time the production of disposable, one-use goods will increase. The system of value of these goods will be described by a different set of attributes, such as: appearance, pleasantness, convenience, instantaneity, etc. This tendency is already observed in many products such as milk containers, napkins, handkerchiefs, syringes, shavers, toothbrushes, etc. In the final effect all products will probably be made for single use only, as it is more pleasant to always use entirely new things than second-hand ones. Of course these changes in the material domain will be transferred also into the philosophical domain. Thus, instead of being faithful to an old friendship, partnership, lover, employer, country, etc., society will display tendencies for changing everything into a newer one (it is interesting that already now, the more technologically advanced a given nation is, the greater such tendency seems to be displayed). In turn the lack of permanency and stability is the beginning of chaos. The above will be additionally amplified by the desire of producers to increase the sale of their goods, which will result in the promotion of a consuming, graspy, lazy, and egoistic lifestyle, according to the philosophy of

## parasitism.

**(#9) The unimaginable migration of people, instability of populations, and demographic explosion.** The fact that people currently spend most of their life in the place of their residence mainly results from the costs and inconvenience of travelling. But when travelling becomes almost free, and when people can travel with their whole house and possessions then everyone will be on the move. Instead of the nearest shop people will go shopping to the next city or even country. When they become bored with one place, they will move to another. Bad weather will initiate the shifting. In the final effect, the whole population of our planet will be in a state of continuous move, disorganizing production, choking highways and transport facilities, and making any control over crime, conduct, morality, health, epidemics, etc., almost impossible. Contributing to the above would be a demographic explosion which would be the effect of reducing the costs of bringing up children (these costs today are one of the main breaks that limit the number of children).

**(#10) The devaluation and fall of the present structures of power.** The organization of countries and societies on the present principles will not be possible any longer after the introduction of these machines. The main reasons for this are as follows:

- The telekinetic free energy devices make very difficult, if not impossible, the execution of payments for the energy they produce. Even if the authorities introduced the law enforcing that newly-sold such devices must be provided with electricity meters, these machines are simple enough for many people to make them on their own, and enough small to be secretly used. Payments for the energy used in most of the countries lie at the foundations of the present system of taxes. In turn the system of taxes is the backbone of almost every country. Therefore, in the face of impossibility of charging for the energy consumed, the whole present structure of countries and governments may collapse.

- The telekinetic free energy devices undermine the present orthodox scientific and educational establishment. Contemporary societies raise numerous objections against philosophical and moral foundations of present orthodox science and education. For example these objections state that science in the current form leads our civilization to destruction. By intentional removal of the spiritual element science introduces a growing disproportion between technological and spiritual development. Therefore, an increasingly growing number of people in the world (including into this number also myself - Dr Jan Pajak, the author of this web page and the author of monograph [1/4] - see there subsection H10), call for the reformation of science and education on Earth, and for introducing to education the most vital components of the philosophy of totalizm (e.g. the introduction to teaching of some moral laws, totalizm, parasitism, Concept of Dipolar Gravity, etc.). The main reason for which this reformation was NOT forced yet upon the Earth's science, is the lack of an obvious proof that present science is wrong. But the telekinetic free energy devices and other telekinetic machines provide just such a proof. After all, this science right now not only obstructs intensively the construction and research on the principles and phenomena involved in telekinetic machines - for details see subsection K4 from volume 10 of monograph [1/4], but openly claims that the building of such telekinetic machines is physically impossible. Therefore the wide

introduction of these machines to life will prove beyond any doubt, that the present science on Earth is based on rotten philosophical foundations, and this way probably will release the long suppressed need for the total reformation of orthodox science and education.

- The Concept of Dipolar Gravity, from which the explanation for the operation of telekinetic free energy devices is derived, reforms also the foundation of religion. It is because in this concept, the substance which prevails in the other world and from which the counter-material copies of all objects are made, in its natural state is capable of thinking. Therefore, in the Concept of Dipolar Gravity, the entire universe is a kind of a huge brain (i.e. the "universal intellect" by religions called **God**), in which we all are submerged and which "hears" all our thoughts - see subsection I3.1 from volume 5 of monograph [1/4]. Apart from the physical laws, this intellect also introduces and executes with an iron hand a set of so-called **moral laws**. The best example of these moral laws is the "Boomerang Principle", which states approximately that "whatever feelings a given person induces in others, after a purposely delayed time exactly the same feelings others will induce in this person"). The Concept of Dipolar Gravity also teaches that the universal intellect can be objectively investigated with the use of tools which currently are domain of science (not religion). In this way, the dissemination of telekinetic free energy devices, which represent a physical proof for the correctness of the Concept of Dipolar Gravity, may cause the fall of present religious institutions and structures, and the adoption of this new concept as a new scientific-technical-religious philosophy of the mankind.

The country, science, education, and religion are the foundations of present societies. Their possible undermining could cause a revolution of the extend unknown in the history of mankind. These people who do not know statements of the **Concept of Dipolar Gravity**, or do not know the philosophy of **totalizm** which stems from this concept, may be afraid that in the course of this revolution chaos and anarchy could begin to prevail which could mark the end of our civilization as we know it. But these who know totalizm know also, that this introduction of these devices will be a beginning of the more moral and progressive humanity.

\* \* \*

During reviewing the above consequences of the wide and uncontrollable spread of telekinetic devices, in particular - telekinetic free energy devices which generate the unlimited amounts of free energy, it is worth to remember about their dependence on the philosophy that is practiced by humanity. Namely, the appearance of the above consequences in the manner and extend described here can take place only when our civilisation is to maintain the present philosophy called **parasitism**. But if there is a change of the commonly practiced philosophy, from the present immoral parasitism into the futuristic moral **totalizm**, then many of the consequences described here may not appear at all, or appear – but be easily and fast taken under control. (Note that such a global change of the prevailing philosophy can be triggered just by the introduction of telekinetic free energy devices.)

## #B5. What requirements must fulfil inhabitants of the "telekinesis free zone" (TFZ), and people who live outside of this zone?

In order to establish and maintain the existence of the "telekinesis free zone", it is going to be necessary to fulfil several conditions both, by people living inside of this zone, as well as people from beyond this zone. For a full understanding the declaration contained in this web page, I am going to explain now what conditions these are.

**A. People living in this zone.** To the basic duties of people living inside of the "telekinesis free zone" belongs as follows:

**(A1) Do not purchase, produce, own, nor run any devices which release the phenomenon of technical telekinesis.** On the area declared as a "telekinesis free zone", practically should be officially forbidden ownership, production, purchase, import, or running such devices under any excuse or purpose - even for research.

**(A2) Do not import nor produce any substances which display permanent telekinetisation.** Ownership of such substances and their practical use within the zone discussed here also should be officially forbidden.

**(A3) Do not allow to this zone any vehicles the propulsion system of which forms the phenomenon of technical telekinesis.** The landing of such vehicles in this zone, as well as jus flight within the atmosphere or boundaries of this zone, must be absolutely forbidden. In turn a serious crime should be the emptying telekinetic vehicles from anything above such a zone.

\* \* \*

**B. People living outside such a zone.** To the basic duties of people living in areas other than the "telekinesis free zone" described here, would belong as follows:

**(B1) Refraining themselves, and making impossible to others, exporting or sending any telekinetic devices to someone living within the "telekinesis free zone".** In fact bringing or posting any telekinetic devices to this zone should be treated as a crime and punished by law as a crime.

**(B2) Do not allow that any permanently telekinetised substances in any manner are allowed into the boundaries of this zone and polluted the natural environment of this "telekinesis free zone"..** This zone must be especially well protected against the access of any substances permanently telekinetised into its territory.

**(B3) Protect the "telekinesis free zone" against the flight above it, and landing in it, any telekinetic vehicles.**

## #B6. Whether the "telekinesis free zone"

## (TFZ) is going to be perceived as a good or bad thing?

Of course, every limitation imposed on people, is for them a source of various inconveniences and irritations. Therefore to a part of people living inside of the "telekinesis free zone", it will be perceived as a "deprivation" them of citizen's liberties. Thus amongst the society from the inside of this zone always such individuals will appear, which will fight out this limitation.

In fact there are cases in real life, when someone imposes "immoral" limitations which then are fight out by various people. In this cases the "immoral" character of such limitations can be unambiguously proven with the use of definition and attributes of "immorality" provided by the philosophy of totalizm. Examples of such civil limitations which fulfil the totaliztic definition of "immoral" restrictions, are: the law which forbids shops to be open on Sundays or at nights, the law which forbids driving a car without fastening safety belts, the law which forbids disciplining our own children with the use of corporal punishment (such a law was introduced in New Zealand - for descriptions of it see item #B5.1 from the web page will.htm), or the areas where photographing is forbidden. Of course, in cases of such "immoral" restrictions, the society has the moral right to subdue to the pressure of protesting people and to remove given restrictions. After all, in case of immoral limitations, their summary influence on the society is undesirable. Means they do more damage than good. However, always there are limitations imposed on civil liberties, for which their desirable influence decisively outweighs the inconveniences and irritations which they cause. As an example consider the restrictions on smoking or on use of drugs, or restrictions on showing in public these areas of our body, or these our life functions, which may induce disgust in other people. In the vital interest of the society lies maintaining and pedantic execution of such "moral" restrictions.

One out of such restrictions, about which we already now can prove, that the strict obedience of it is going to lie in the public interest of entire humanity, although for these people which it affects directly not always it will be accepted willingly, is just the restricting of telekinetic polluting of the natural environment of the entire our planet. So independently that for sure always there will be people who will object this restriction, still our civilisation as a whole should introduce it for the good of all people, and should execute it with an iron consequence.

At the present level of our knowledge it is unknown whether for countries which are included into this "telekinesis free zone", with the elapse of time it turns out to be a good luck, or rather a kind of curse. (Similarly as it is not known presently, whether - if antibiotics or pesticides free zone is introduced and executed on Earth, this zone in long term would prove to be a blessing or a curse for people who would live in there.) However, for human civilisation as a whole such a zone for sure turns out to be absolutely necessary.

Summarising what is explained in this item, the "telekinesis free zone" will be a source of both, beneficial as well as undesirable consequences. Probably it is going to happen in such a way, that for people who live in this zone, the immediate consequences of it turn out to be more undesirable and irritating, than

beneficial. However, from the point of view of our civilisation as a whole, the beneficial consequences will decisively outweigh the undesirable ones. Therefore, in spite that there always be a lot of people who will try to cancel the existence of this zone, the humanity as a whole is vividly interested to establish such a zone decisively, to maintain it with an iron consequence, and to pedantically monitor everything that happens in it in a manner which differs from that in areas affected everyday with a telekinetic pollution of the natural environment.

---

## **Part #C: Justifications applying to the "telekinesis free zone" (TFZ):**

### **#C1. Why it is Antarctic, Australia with Tasmania, and New Zealand, which best suit the fulfilment of the honourable role of the "telekinesis free zone" (TFZ)?**

There is a whole range of objective reasons, for which in my own estimation, such areas and countries as Antarctic, Australia with Tasmania, and New Zealand suit the best out of all countries in the world to become this "telekinesis free zone". Let us list here the most important out of these reasons:

**(i) The natural separation from the rest of the world, and clearly marked sea borders..** If on the "telekinesis free zone" designate e.g. any European country, then people who live on the border of this zone and who would not wish (or would wish) to be included into it, could resort to various tricks, for example - change the course of borders, split into two, join another country, etc.. However, in case of Antarctic, Australia with Tasmania, and New Zealand, there is no problem with borders. These borders cannot be changed because they are defined by the nature and by geography.

**(ii) The easiness of safeguarding of borders.** The link of the rest of the world with Antarctic, Australia with Tasmania, and New Zealand is accomplished only via airplanes or boats. Therefore, is it comes to the necessity of guarding whether telekinetic devices are not smuggled (as "contraband") onto these areas, in a similar manner as presently people guard that drugs are not trafficked over there, the safeguarding of Antarctic, Australia with Tasmania, and New Zealand will be much easier than guarding of e.g. any other area or country in the world.

**(iii) The presence of practically all climatic spheres and natural environments.** Apart from Australia, New Zealand, and Antarctic there no other area on Earth, which on one hand would be separated from the rest of the world by natural sea borders, on the other hand would represent all climates and

natural environments of Earth. This in turn means, that the spreading the telekinesis free zone on these two countries, makes possible in future the monitoring of influence of telekinesis on all possible environments and climates on Earth.

**(iv) The unique nature, flora and fauna.** In nom other place on Earth is such a nature, flora and fauna, like within New Zealand, Australia, and Antarctic. In turn the main purpose of the "telekinesis free zone" is to protect the nature and living creatures against telekinetic pollutants which could cause mutations and genetic problems, uncontrollable growth or undergrowth and generation. Therefore, the most beneficially is when the telekinesis free zone is imposed onto areas of these two countries.

**(v) Insignificant contribution of these countries to the state of technology on our planet, with a simultaneous large contribution to the production of food.** In turn, the influence of technical telekinesis onto people will be most noticeable, and thus requiring the most strict monitoring, just through the telekinetised food.

**(vi) The relatively large area with simultaneous small population of people living in there.** Thus the benefits from establishing this zone spread onto relatively large area of our planet, including practically all climatic zones. Simultaneously, the possible inconveniences which may result from maintenance of this zone will affect by relatively small number of people.

**(vii) To date accomplishments in the direction of becoming the "telekinesis free zone".** For example, New Zealand is the only country in the world, which presently maintains the "nuclear free zone". So New Zealand has already a historic tradition of protecting its territory against the pollutants which endanger it. (The "nuclear free zone" declared in 1988 some David Longe - the Prime Minister of New Zealand at that time.) Australia also tries to contribute noticeably to the maintenance of our planet free of pollutants and threats. For example, in time of preparing the idea of the "telekinesis free zone" (i.e. shortly after 23 September 2005) very vividly was discussed in Australia the matter of undertaking by this country the role of "world's storage for radioactive refuse". This in turn documents the readiness with which Australia is ready to add its own contribution to the keeping our planet free from dangerous pollutions. In my own opinion the maintaining the "telekinesis free zone" will not be more difficult for citizens of Australia, than keeping the safe storages of radioactive litters. Simultaneously the contribution to the progress of our civilisation will be even bigger.

**(viii) The fact that I am a New Zealander myself, and that many my superiors and colleagues were Australians.** This in turn means, that the initiative of initiating and maintaining this zone originates from inside of the zone. So it is NOT imposed to citizens of these countries by an outsider, who would not be affected in person by consequences of it. Expressing this in other words, when I declare with this web page the establishment of the telekinesis free zone on the area of New Zealand and Australia, i.e. where I live as well, by this I volunteer myself to endure with all others any inconveniences and limitations which with affect this area because of such a zone. So I am the first who volunteers to subject myself for the good of entire humanity, to all limitations and inconveniences that may affect all other citizens of this zone, if the zone is

established. In addition, of course I also accept the awareness, that as a person who postulated TFZ, both myself, as well as memories of my existence, will be exposed to persecutions which one day will eventuate from this idea.

**(ix) The fact that New Zealand and Australia would be the last countries in the world which would be ready to promote any research on technical telekinesis.** From the first moment when I discovered the existence of technical telekinesis and invented devices working on the basis of this phenomenon, I try to obtain a permission to be able to officially research these phenomena and devices. The undertaking official research of these phenomena and devices I proposed practically every university in existence in New Zealand and Australia. To each of these universities at some stage I filled a job application indicating in it that I would like to do research on such phenomena and devices. Always the only reply which I received was a refusal. Myself, I am NOT the only creative researcher to whom the determination of these countries to unofficially retain the status of the "telekinesis free zone" was manifested. For example in New Zealand the inventor who developed a revolutionary telekinetic heater that not only immediately boils water, but also probably telekinetises this water, for over 60 years continued efforts to receive a permit for the industrial production of this heater. He never obtained this permit. Fate of this inventor and his extraordinary heater is described on the web page [boiler.htm - about shocking history of revolutionary heater which bits all records](#). Very meaningful treatment received also in both these countries the inventor of so-called "N-Machine" - means a telekinetic generator of electricity. A brief account on the subject of this inventor and his N-Machine is contained in item #H1.3 of the web page named [newzealand visit.htm](#). So it is rather obvious, that representatives of science and bureaucracy of these countries clearly documented with their actions, that they decisively do not want to promote on their territory anything that has a connection with technical version of telekinesis or with telekinetic devices.

## **#C2. Why I believe that I have a moral obligation, and a moral right, to declare the "telekinesis free zone"?**

Problem with the declaration of the "telekinesis free zone depends on this, that in order it is effective, it must be declared before these devices are distributed. Because the first prototypes of such devices already work on Earth, the right time for declaring such a zone arrived right now. (Examples of prototypes of telekinetic devices are famous telekinetic aggregates named "Testatica" and "Testa-Distatica", which are owned by the Swiss religious commune called "Methernita". Descriptions of these aggregates are provided on a separate web page [free energy.htm - about telekinetic free energy devices](#). The prototype of such a telekinetic free energy device is also so-called "N-Machine" which was made famous around the world by a researcher named Bruce DePalma - mentioned in item #H1.3 of the web page named

[newzealand visit.htm](#). However, the telekinetic devices which were the most spread around the world were so-called "**crystal radios**" which contained embedded into them electronic circuitry forming the so-called [telekinetic cells](#). It was just because of the containing such "telekinetic cells" that these "crystal radios" worked perfectly although they did not have any battery nor any other energy supply.) But, as so far, I am the only scientist on Earth, who carry out a wide scientific research which incorporate all phenomena induced by these devices. There is no other scientist on Earth at the moment, who would research these phenomena from the point of view of their mechanisms, consequences, etc.

Taking under the consideration, that I am the only scientist on our planet, who gained the awareness of all consequences and mechanisms released by the phenomenon of technical telekinesis, and who feels responsible for the manner in which this phenomenon is mastered and controlled, I arrived to the conclusion that I am the only scientist who has not only the moral duty, but also a moral right, to declare the "Telekinesis Free Zone" (TFZ).

---

## **Part #D: Consequences of establishing the "telekinesis free zone" (TFZ):**

### **#D1. So here is the zone declared - what next?**

Of course, I have no illusions that just by the declaration of the zone described here for the area of Australia, New Zealand, and Antarctic, I cause that in fact this zone will be established and become reality. After all, the actual existence of this zone will depend on the will and decisiveness of all of us. However, I hope that by declaration of this zone already now, I realize to all interested people the following:

(i) The actual existence of the phenomenon of technical telekinesis and the induction of it even in devices which already were mass produced on Earth, for example in so-called [crystal radios](#).

(ii) The uniqueness of the phenomenon of technical telekinesis and the need to treat it in a special manner.

(iii) The inclusion of to wide range of aspects into the phenomenon of telekinesis to be able to identify them, to encompass them, and to learn control them all, without the establishing and having the "telekinesis free zone".

(iv) The absolute necessity to establish "the telekinesis free zone" if one wishes to control consequences of the telekinetic pollution of the natural environment.

(v) The true interest and benefit of practically every person on Earth to

establish such a zone and to maintain it with an iron consequence.

(vi) The undisputable fact that New Zealand, Australia and Antarctic are most suitable amongst all countries and geographic areas in the world to become such a zone.

In turn, by realising these facts before telekinetic devices become disseminated throughout the world, gives to all the chance that people on Earth accept the absolute necessity to have such a zone, and in collective effort they all begin to implement such zone in real life at the moment when first these extraordinary devices become implemented into mass production and distributed throughout the world. Of course, **the most critical moment for TFZ arrives when the serial factory production of telekinetic devices is implemented, and when first such telekinetic devices appear in shops. I do hope that builders and producers of these first devices are then going to be aware of everything that is written on this web page, and thus from the very beginning they build in into their activities all precaution mechanisms needed that these devices are prevented from entering inside of the zone described here and prevented from telekinetic polluting the natural environment of this zone.**

---

## **Part #E: Summary, and the final information of this web page:**

### **#E1. Summary of this web page:**

The "telekinesis free zone" soon is going to turn to be absolutely vital for our civilisation. All premises indicate that New Zealand, Australia and Antarctica deserve the honour of hosting this zone at their territories.

### **#E2. I would suggest to return periodically to this web page in order to check further explanations concerning the complex problem of technically released telekinesis and the "telekinesis free zone":**

Unfortunately, the matter of establishing on Earth the "telekinesis free zone" is enormously complex one. It hides in itself many aspects which require complex explanations. Simultaneously, because of the high sensitivity of many of these

aspects, their explanation requires careful and diplomatic approach. As such, before it is presented, it requires many long thinking over and considering from a number of different angles. Therefore, this presentation is still just an initial information that the "telekinesis free zone" is absolutely necessary for our civilisation, and that the area of New Zealand, Australia (with Tasmania) and Antarctic is the best imaginable choice for it. In order this initial information transform into a complete explanation of all aspects of this difficult and delicate problem, the above descriptions must be improved further, extended for further aspects, and shown from several different angles. Therefore it is worth to periodically return to this web page, and check how the matter of the "telekinesis free zone" presented here gradually develops. Please notice however, that new versions of this web page cannot be made available immediately under all addresses at which it is disseminated. Therefore, if under this address here only an old version of this web page is available, then it is advisable to check also under other addresses listed in "Menu 3", whether any newer and better update of this page is already available at other addresses.

It is also worth to check periodically the blog of totalizm lately available at address [totalizm.blox.pl/html](http://totalizm.blox.pl/html) and [totalizm.wordpress.com](http://totalizm.wordpress.com). On this blog many matters discussed here are also explained with additional details written as new events unveil before our eyes.

Notice that readers can also download to their own computers a source replica of this web page, as this is explained on web pages [FAQ - questions](#) or [replicate](#) available through "Menu 1" and "Menu 2". (In order to download this replica, you just need to click in "Menu 1" on the item [source replica of this page](#). Note however, that if after such a click the replica does NOT download, this probably means that on a given web site this replica could not be offered to interested users, e.g. because of memory limits of some sort, or because there are some other technical problems which block the capability to download it from this server. In such a case it is advisable to change the server and web site by using one of the addresses listed in "[Menu 4](#)" or "Menu 3", and then try to download this replica again from a next server and next web site.)

## **#E3. How with the web page named "[skorowidz links.htm](#)" one can find totaliztic descriptions of topics in which he is interested:**

A whole array of topics equally interesting as these from the above web page, is also discussed from the angle that is unique to the philosophy of totalizm. All these related topics can be found and identified with the use of [content index](#) prepared especially to make easier finding these web pages and topics. The name "index" means a list of "key words" usually provided at the end of textbooks, which allows to find fast the description or the topic in which we are

interested. My web pages also has such a content "index" - only that it is additionally supplied in green [links](#) which after "clicking" at them with a mouse immediately open the web page with the topic that interest the reader. This content "index" is provided on the web page named [skorowidz links.htm](#). It can be called from the "organising" part of "Menu 1" of every totaliztic web page. I would recommend to look at it and to begin using it systematically - after all it brings closer hundreds of totaliztic topics which can be of interest to everyone.

## #E4. Emails to the [author](#) of this web page:

Current email addresses to the author of this web page, i.e. officially to [Dr Eng. Jan Pajak](#) while courteously to **Prof. Dr Eng. Jan Pajak**, at which readers can post possible comments, opinions, descriptions, or information which in their opinion I should learn, are provided on the web page named [pajak jan uk.htm](#) (for its version in the HTML language), or the web page named [pajak jan uk.pdf](#) (for the version of the web page "pajak\_jan\_uk.pdf" in safe PDF format - which safe PDF versions of further web pages by the author can also be downloaded via links from item #B1 of the web page named [text 11.htm](#)).

The author's right for the use of **courteous** title of "Professor" stems from the custom that "with professors is like with generals", namely **when someone is once a professor, than he or she courteously remains a professor forever**. In turn the author of this web page was a professor at 4 different universities, i.e. at 3 of them, from 1 September 1992 until 31 October 1998, as an "Associate Professor" from English-based educational system, while on one university as a (Full) "Professor" (since 1 March 2007 till 31 December 2007 - means at the last place of employment in his professional life).

However, please notice that because of my rather chronic lack of time, I **reluctantly reply to emails which contain JUST time consuming requests**, while simultaneously they document a complete ignorance of their author in the topic area which I am researching.

## #E5. A [copy of this web page](#) is also disseminated as a [brochure from series \[11\]](#) in the safe format "PDF":

This web page is also available in the form of a brochure marked [11], which is prepared in "PDF" ("Portable Document Format") - currently considered to be the most safe amongst all internet formats, as normally viruses cannot cling to PDF. This clear brochure is ready both, for printing, as well as for reading from a

computer screen. It also has all its [green links](#) still active. Thus, if it is read from the computer screen connected to internet, then after clicking onto these green links, the linked web pages and illustrations will open. Unfortunately, because the volume of it is around a double of the volume of web page which this brochure publishes, the memory limitations on a significant number of free servers which I use, do NOT allow to offer it from them (so if it does NOT download from this address, because it is NOT available on this server, then you should click onto any other address from [Menu 3](#), and then check whether in there it is available). In order to open this brochure (and/or download it to own computer), it suffices to either click on the following green link

[tfz.pdf](#)

or to open from any totaliztic web site the PDF file named as in the above green link.

If the reader wishes to check, whether some other totaliztic web page which he or she just is studying, is also available in the form of such PDF brochure, then should check whether it is listed amongst links from "part #B" of the web page named [text 11.htm](#). This is because links from there indicate all totaliztic web pages, which are already published as such brochures from series [11] in PDF format. I wish you a fruitful reading!

## #E6. Copyrights © 2013 by Dr Jan Pajak:

Copyrights © 2013 by Dr Jan Pajak. All rights reserved. This web page is a report from outcomes of research of the author - only that is written in a popular language (so that it can be understood by readers with non-scientific orientation). Ideas presented on this web page (and also in other publications by the author) are unique for the author's research, and thus from the same angle these ideas were NOT presented by any other researcher. As such, this web page presents ideas which are the intellectual property of the author. Therefore, the content of this web page is the subject to the same laws of intellectual ownership as every other scientific publication. Especially the author reserves for himself the credit-rights for the scientific discoveries and inventions described on this web page.
