

**The In god's name the most merciful**

**The thunderbolts industry ( 3 ) : 1**

**This research I meant from him a making the maker brother that he yearns for new ideas and creations her development and the discovery of new ways enables him also .**

**(1)- this condenser is found within the flash light circle special by the photographic camera and these machines her insertion to the aeroplane except doubts or his like can and will exploit him to explosive electric shocking work .**

**(2)- the release of the intensive welder from the headquarters an user ironing and thermal then do the removal of the plastic from the condenser body except his damage to his return from a new covering so that the cutting is longitudinal in Al-Raafi'i 's Mus very and sharp or is horizontal by the self of the sharp Almos the important is that the condenser undressing is with the preservation on the covering .**

**(3)- separate the condenser head as in the photo from the top of him and an internal filling will find a قرابع about folded papers on a tin and a folded on my intensive eye from the inside deputized , the preservation on the condenser tips that by the inside to the stabilization of Altngstn wire they and the head separation form by thin saws or a strong cutting blade ought until the return of the extracted head enables you .**

**(4)- a bibliography Altngstn wires on my intensive eye from the inside and that a twisting me the sides on him then do the condenser packing by the three necessary materials to the shocking work ( a tonic material is an instigator – a burning – ).**

**(5)- prepared the head in his place with a planting Altngstn realm in the burning material so that he is in her middle and contiguous to her an undertaking , then do the head by a thick paste until she do not enter to inside the shocking from the small holes that the cutting with the material wipe caused sticking so that she do not accumulate on some outside and his natural**

	<p>form return to him does not can .</p>
	<p>(6)- he prepared the plastic covering on the metallic covering to the condenser and do his sticking by a material with fast sticking so that he returns to his natural form except they complained you then he prepared the condenser to his electronic circle inside the camera except the sides welding because that the shocking will sin and slows from the operation of his dismissal inside the aeroplane and to do his stabilization only a twisting me his sides are on the circle .</p>

**Important notes :**

- 1- The mercury Flmnat as an instigator subject is not used because the covering of the metallic condenser from the aluminium the according to of the well-known rule she do not put an Alflmnat in a covering from an aluminium .
- 2- A goodness what from instigator materials he is used the more bullets to this idea because the acetone Broksid evaporates and his disclosure can by the explosives disclosure set and this set that is not found in all universe countries .
- 3- She should be the camera with simple disconnection and the expression and the good of these machines she that uses once then pelts taking into consideration her disconnection ought by efficiencies and her return this except a scratch or what the misuse by her comes out then the battery removal from her ought where an internal battery is found to her to the condenser shipment .
- 4- At release the intensive from the headquarters a certainty from his emptiness from any cargos because he delivers a high electric charge she can shock you during the conquest .

# this idea on arose a surprise from Fadl Allah then I wanted that I supply you with her and she that the insertion of the tonic materials and the instigator one enables you and burning to the aeroplane by means of the medicine box specific by you and that by the capsules packing after her emptying from the found medicine by her .

**Notes :**

- 1- The capsules carrying to the medicine should be more from carrying to the explosives so that her smell predominates .
- 2- The capsules education ought specific by each subject or capsules use by different colours and is the marks are a قراب ع about small points and not clear except to you .
- 3- He should be with you a ready small lamp as passed with us a previous and enable you his situation in the keys medal with the lights but except a battery .
- 4- He should be with you a set contains flexes and a likes switch a radio or a recorder and an except .
- 5- He prefers the work on this idea by a team and he is not a single person until he does not hesitate many on the aeroplane WC .
- 6- She will not need the detonators disconnections and the materials extraction from her only do her accumulation over some inside a covering from the metal or the cover of your pen .
- 7- Only you enable you Fatah the capsule of the burning material to the planting of the small lamp in her or that the lamp with the capsule containing on the burning material resurrects an insertion inside the pen covering a side to a side .
- 8- Or put a wick as that in the children rockets in your pocket then resurrect him with the burning capsule or open her and put the wick in her and therefore do by the aeroplane detonation yourself and the god he accepts you .

9- I look at the photo by the below and a reflection by her well .

I put in the green capsule a tonic material and in the yellow capsule instigator subjects and the red capsule are burning materials and she قراب ع about chlorine mixture + a sugar or milled top of the domestic Match or the powder of the black gunpowder and if resented by you the world is bullet thigh and her gunpowder finished in the capsule .

**Important guidance :**

- 1- The pen covering use as a covering to the shocking or the cover of the pen of the make-up of the wife and he can the better is because he is a metal from the aluminium and a slaves .
- 2- Covering good he trimmed an Albarkr .
- 3- She is found medicinal capsules by a size ( 1000 long period of time gram ) and she the better where she cares for gram of the tonic material and another she cares for gram of the instigator subject .
- 4- A dawn yourself in the aeroplane WC and no discredits a line who like owner of the explosive shoe preceded .
- 5- Take with you the wife after the question showing on her so that she is from kinder people by your wife .
- 6- She do not ride the wick except in the aeroplane and even if that searched the medicine box no she is suspicious by this form .
- 7- The wick can put him in your pocket except the lesser like or a doubt .
- 8- Take Bibi Gnsou 's powder box a situation by her the reader mixture : ( 1 ) - the ammonium nitrate ( a 88% ) + a milled sugar ( a 12% ) or put the reader mixture : ( 2 ) - the potassium chlorine ( a 70% ) + an agricultural match ( a 20% ) + a milled sugar ( a 10% ) ... These mixtures there is no she by her aluminium powder then jasmines her disclosure in the ordinary examination sets in the airport and it does not matter if one gram placement from the ordinary powder can so that he controls the smell a substitute from the explosives smell control .

**9- The execution of this operation in African airports or poor countries do not care الو جوي الو by her new sets to the explosives disclosure and the prospering god .**
