

Our Ecological Footprints Collage

Part 1: Collage

Construct a collage on an 11x17 sheet of paper to show images “human impacts” on the land, you must cover the paper fully, and be sure to include different types of footprints (for example don’t have a collage that only displays logging). Create a title for your collage (be creative and make it stand out on the front).

Part 2: Description of footprints

On the back of the collage write a description for each of the footprints you have displayed on the front. Example a picture of a garbage bag: The garbage bag represents the huge amounts of waste human produce on a daily basis.

Part 3: Shrinking My Footprint

Construct a chart with at least 10 items in each column.

Resources Used and Waste Produced	Ways We Can Improve

	1	2	3	4
Title				Title is creative and stands out
Variety of Footprints				12 different footprints are presented
Collage				is neat, glued down, covers the paper
Descriptions				12 footprint pictures are describe with good clarity
Shrinking my Footprint				-identifies 10 uses/waste and 10 improvements
