

Conventional Energy

(Perspectives pg70-73)

1. What are the 3 conventional sources of energy in Canada?
2. Identify the three areas in which coal has been used, and what it was used for.
3. Describe 3 problems of using coal as a power source.
4. How is the consumption of energy different in the changing seasons?
5. During what hours is the peak electrical demand?
6. What 3 provinces produce (oil refinery) the most number of barrels of oil per day?
7. Identify the area in Canada where most of Canada's energy is produced or located. What energy sources are located there?
8. Locate the St. Lawrence Seaway, Niagara Falls and the Columbia River on a map. How is the US border a factor in the production of power at each of these sites?
