

Nose Cone and Transition Calculation Program

This is a simple program to do the calculations for making a paper nose cone or transition. All you need to do is input "Larger Tube Diameter", "Smaller Tube Diameter"(set to 0 to make a nose cone), and "Length", and it gives you back three values, "Angle", "r1", and "r2", which you then use to cut out the nose cone or transition according to the following diagram:

Then, simply roll it up and glue at the glue tab.
