

Write a program to solve Exercise #6 (Page 40) in the assigned book.

Be sure to use good programming style and naming convention as discussed in class and as outlined in the coding guidelines. Pass in all code, and a screen dump of a successful compile/link of the program, and a screen dump of the program execution.

Put all pages together and staple with one staple in the upper-left-hand corner. The order of the pages should be:

1. screen dump of successful compile and link
2. screen dump of program execution
3. screen dump of code

Make sure your name is written on each page.
