4-6 June 2007**

**“Leveraging External Risk Management Process to
Augment Internal Program”**

Abstract

3:35 PM-4:00 PM Monday, June 04, 2007

Cybertrust: Leveraging External Risk Management Process to Augment Internal Program

Speaker: **John Petrie**

Location: **Maryland Suite**

Session Type: **Sponsor Case Study Session**

The risk review process must be linked to the company's project management and approval process and the budget review process. Leveraging external risk management processes to augment your internal program provides a solution to the continuous review process. This case study will provide an example of the linkage needed between the external RMP process and the project and budgetary processes, and how it can support your overall risk mitigation strategy.
