

The Power Is In The Product

“Peel” Away the Look of Tired Skin in Just 10 Minutes

ARBONNE®
INTERNATIONAL

NutriMinC® RE9® REgain Illuminating Enzyme Peel

Illuminate your skin with an exotic cocktail of natural fruit enzymes from African papaya and Far East pineapple that gently exfoliate, revealing a more even complexion and noticeably smoother-looking skin. In just 10 minutes the peel purifies and revitalizes the look of tired skin for a more youthful, radiant appearance.

Powerful Anti-Aging Exfoliant That Is Gentle and Easy To Use

This powerful anti-aging exfoliant is a natural, safe alternative to more expensive and harsh plastic surgery and cosmetic treatments. It is gentle and easily tolerated even on a sensitive-prone and older, more-mature skin; yet it is very effective. It contains no abrasive particles, so it is a great solution for daily, gentle exfoliation without irritation. Also, because this product is pleasant and easy to use, more frequent usage offers the most dramatic visible results.

Made from Natural Fruit and Plant Extracts

Papaya fruit extract – Papaya contains an enzyme called Papain. It works as a natural botanical chemical exfoliant to remove any top layer of dead surface skin cells and flakiness to give the skin a youthful appearance.

Pineapple fruit extract – Pineapple has a natural enzyme also known as Bromelain. This enzyme breaks down the glue that holds those surface cells together so the skin can end up becoming much softer and smoother.

Other Fruit Complexes - This fruit acid blend is a natural source of Alpha Hydroxy acids that has cell-renewing, firming and certainly surface-smoothing properties. It's a combination of root extracts from orange and lemon, but also sugar extracts from sugar maple and sugarcane because of their ability to also exfoliate the skin surface.

Squalane - Squalane is a main ingredient in our skin's own sebum. Squalane is very gentle to the skin; it's non-irritating, it's non-comedogenic, it's a natural lubricating agent. So the product feels very luxurious as you're massaging it on the skin's surface. And because of that, it's highly recommended for sensitive and blemish-prone skin.

Oat bran - Oat bran is a protein that really helps to comfort and calm the skin during the exfoliation process. So you really don't feel it working, you just see the results of it working.

Contains Key RE9 Anti-aging Components

Peptides - Arbonne's Regain Illuminating Enzyme Peel combines two new polypeptides that behave like Retin-A (retinoic acid) without the drawbacks of rashes and irritation. They increase collagen and elastin production leading to firmer, younger looking skin. Studies have shown a reduction in surface roughness, depth and appearance of wrinkles.

Antioxidants - Antioxidants protect the skin against the environment and free radical damage which can deteriorate the skin cells which causes the skin to start taking on the appearance of aging.

Recommended Usage

1. **Supplement your regular skin care regime with a quick, pick-me-up treatment** - Apply a generous layer to clean dry skin, as if applying a mask, avoiding the eye area. Cover face with a warm washcloth, and let sit for 15–20 minutes. Rinse thoroughly and follow your regular skin care regime. Can use morning or night 2-3 times a week.
2. **Give you skin a more intensive overnight treatment** - Smooth on a generous layer over clean, dry face 2–3 times per week instead of using night cream, avoiding the eye area. Cleanse and follow regular skin care regime in the morning.
3. **Help skin get through stressful times** – When skin starts losing its radiance because of stress, tiredness or staying up late, this is an ideal product that can help put that healthy glow back into the skin.
