

Software Experience

I've completed quite a number of compositions by creating and arranging materials into finished products. In fact, most of the materials I've created for marketing my brand were made using these programs. I take great care in ensuring that my designs are customized to a specific, consistent mood.

I'm quite experienced when it comes to photo manipulation and have used Photoshop extensively in my time. I also have utilized Lightroom when it comes to picking and choosing which photos I shall showcase on a sheet which shows that I have a discerning eye for detail.

With countless hours of practice taught by myself showing a high level of self-motivation, I am quite capable at 3D design. I also have a small business where I 3D print various objects and sell them which shows that I have a sense for business.

Want someone who

- Was in the top of their class in a prestigious high school?
- Has business experience acquired through running one of their own?
- Has sought out education at every opportunity and continues to be self-motivated through absolute passion?

Someone who will make the design of your dreams?
