Recommendation Vijay Krishna

It is a pleasure for me to confirm that Vijay Krishna has been doing his masters project in the Food Process Engineering Group at BioCentrum-DTU from October 2006 until April 2007. The main subject of the work has been to exploit the possibility to use CFD simulations for comparing flow characteristics of industrial and pilot plant fermentors to allow recommendation for up-scaling and ordering of fermentation tanks.

Vijay shows high interest in the work he has undertaken. Shown initiative to move the project in the direction of his choice and also done a great job of managing af masters project in combination with a large industrial partner. Vijay fulfils his tasks and is not afraid to seek information and help from scientific staff. He has an excellent English language and is very flexible in working hours.

We have been very much satisfied with the work of Vijay. I find Vijay very competent in engineering disciplines and with an excellent ability to learn new subjects in a short time (Computational fluid dynamics). I can therefore warmly recommend Vijay and is very pleased to have him working in our group.

Yours faithfully,
