Supervisor:

Co-supervisor:

---

1. State the problem statement, scope and objectives of your project. Even if you don't have any change to what described in the project proposal you should still include them for the sake of completeness. If you have made modifications, please describe them clearly. (Normally no more than 1 page)
2. Describe and discuss previous and on-going works related to your problem. These can include background knowledge, existing projects and results, languages and tools to be used, etc., obtained from either published papers in literature or surveys conducted by yourself. Indicate how and in what aspects these works are related to your project. Don't forget to cite them in your discussion and give references. (Normally no more than 3 pages)
3. Within the context of 1) and 2), discuss and summarize the progress of your project. Describe what you have done and achieved so far. You can write about your analysis of various issues and some preliminary results (if any), including system model, design of system architecture and components, solutions (algorithms / protocols) to solving particular problems, etc. (Normally no more than 3 pages)
