

This is a quick set up guide for Bullet Proof FTP server 2.15
The images were pulled off a working FTP server.
Below is the main window.

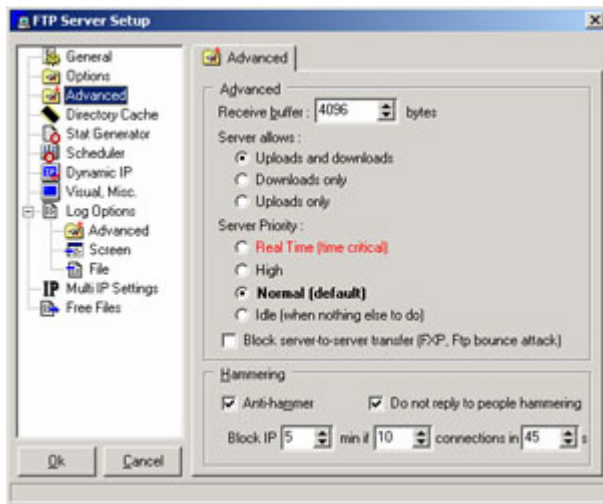

Click on the SETUP menu move down to MAIN and over to GENERAL and click to get the window below..
For the number of users... use this guide **Dialup** = 1user **Cable**=2-3users **DSL**= 3-4 **T-1**= 5-10

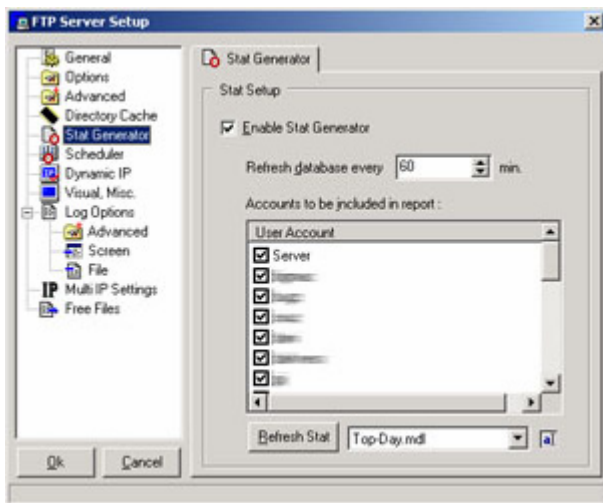

Move down to options and match the setting in this picture below.

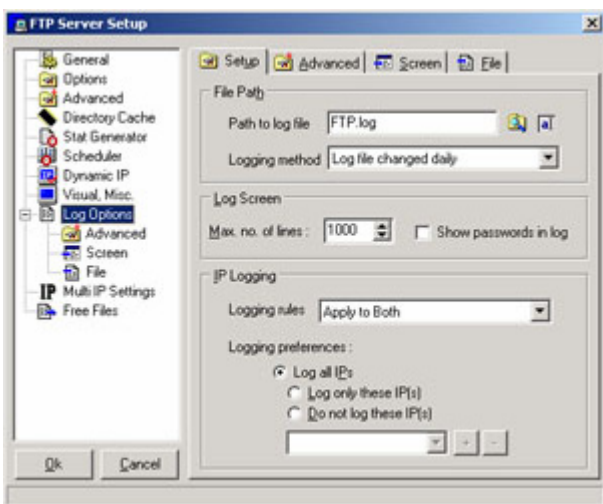

Move down to advance and match these settings pictured below

Match these settings below (note the accounts will be blank until you set up users)

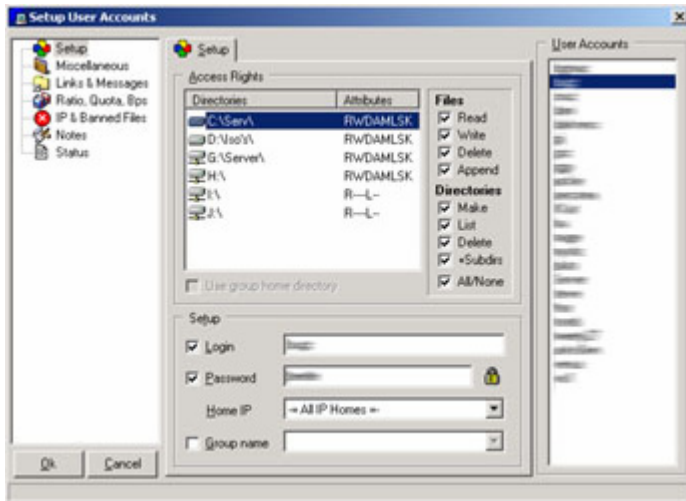

Match the settings pictured below

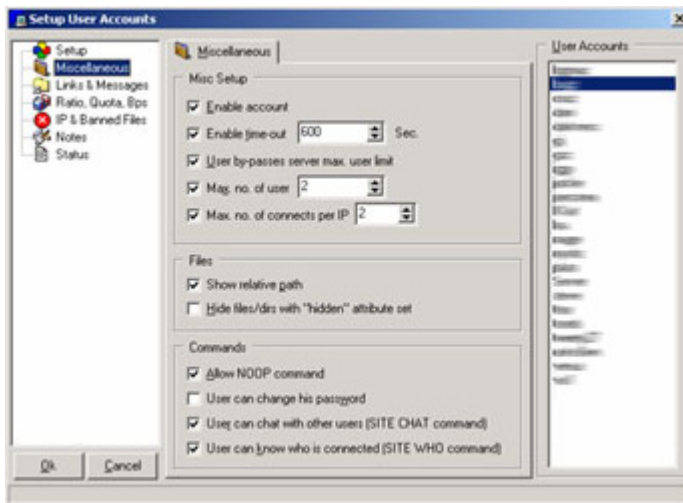

Below is the user account database. This is where you manage account.
 To add an account... right click in the user accounts pain on the far right and choose ADD.
 Fill in the name of the account in the mini window that pops up and highlight the newly added name.
 The right click in the center window named ACCESS RIGHTS to add folders that the user may view.
 Then with that folder highlighted in the center window assign right via the checkboxes to the right of the

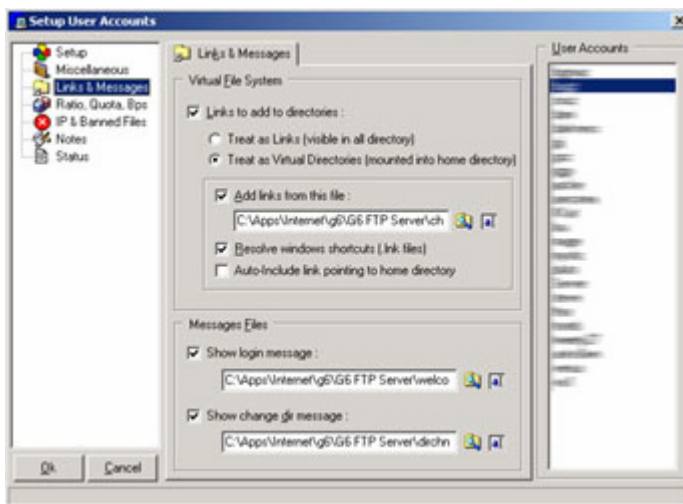

ACCESS RIGHTS window... the right must be set for each user or group of users.

Make the settings for each user the same as you see below.

If you really feel fancy you can check these boxes for special links and messages. but for now UNCHECK THEM ALL for each user.

The rest of the setting you can just leave as they are and you are ready to roll.
