

Dodge-Changing Travel

The Strongest Truck

The Cummins Diesel Engine is the reason that dodges are so strong. The Cummins is the most powerful, longest lasting diesel engine on the market in pickups. This is one way dodge has changed transportation.

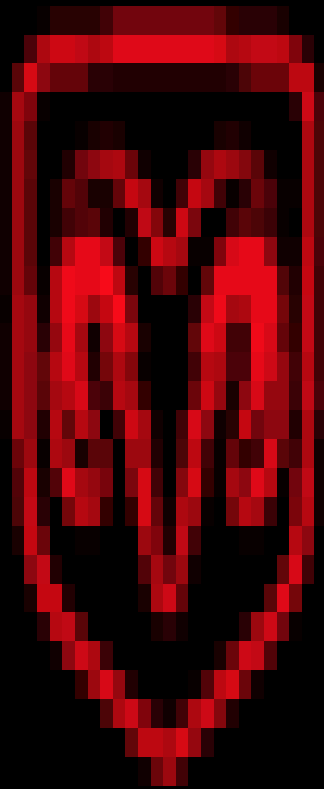

The most powerful V8 engine on the market right now is the 5.7 liter Hemi. The engine pushes an incredible 345 horsepower when it comes off the line. The Hemi created a line of hotrod pickups first, and is now being put in hotrod cars. It is changing the way people get from point a from point b.

5.7 Hemi

The Dodge Viper is a revolutionary car. There is not another car in the United States like it. With its twelve cylinder engine, unique body styling, and unbelievable appeal it has changed the sports car market. The Dodge Viper is now the fastest sports car off the assembly line. This is just another way dodge has changed transportation.

DODGE

GRAB LIFE BY THE HORNS

Dodge also makes family cars. Here are a few of them. This is the Magnum. A station wagon crossed with a sports car. It may have four doors, but hey, “it's got a hemi dude.”
