

The word TROGLO means hole. Troglomenes are animals who sometimes choose caves as their homes.

Troglomiles are animals who like to live in caves but also live elsewhere

Troglobites are animals who only live in caves. They can't survive anywhere else.

Ice caves are formed by water flowing underneath glaciers of ice. Light passing through the ice makes the caves blue.

Sea caves are formed by waves crashing on rocky coastlines.

Lava caves are tubes that form when molten rock flows away from volcanoes. Cool air causes the rock to harden on the outside, and when all the lava has drained out, the tube becomes a cave.

Limestone caves are formed by water coming through the earth and wearing paths through the soft limestone. After many, many years the tunnels widen into huge rooms.
