

Country names

The table below lists every country in the world and gives its name in the country's official language(s).

This document was actually prepared to illustrate writing systems more than anything else, and thus we have no intention of starting any arguments on the theme of what is and is not a “country”. We have included all independent countries, together with all dependencies which are too far from the country upon which they are dependent to be considered as a normal part of that country – so, for instance, the Canary Islands are included as they are a considerable distance from Spain, while the Balearic Islands are not.
