

## NUMERA

Morris A. Bradley

From just knowing a person's birthdate a great deal can be ascertained about their personality and the way they approach the world. Firstly you take the person's birthdate. This is divided into four sections, which are

1. the physical attributes,
2. the mental attitude and thought processes,
3. their approach to spiritual matters, and
4. relates to the overall personality.

The day of the month relates to the physical attributes and the way a person approaches physical activity. The number of the month relates to the mental qualities and attitudes. The year of birth gives information about what this person seeks in spiritual matters, and these numbers added together to get a total and then reduced to a single digit give pointers to the overall personality of the said person.

If we take, for example, someone born 17.9.1941, we can find that the numbers work out as follows when reduced in this way.

- 1) Physical =  $17 = 8$ .
- 2) Mental =  $9 = 9$ .
- 3) Spiritual =  $1941 = 15 = 6$ .
- 4) Overall Personality =  $17 + 9 + 15 = 41 = 5$ .

**THE FOLLOWING NUMBERS NEED TO BE KEPT AS ONE.**

Self sacrifice.
- 22 - Potential for Black and White Magic.
- 29 - Self sacrifice.

By looking at these numbers, firstly it can be noted that the physical attributes will be those of Saturn so that this person may be either limited by their physical body with what they can do or need to learn a great deal of control in order to make the most of the attributes they have. There could be times when fears create such restrictions and these may represent themselves in the way a person holds themselves as well. Problems with the skeletal system and bones are likely and failing to take adequate care of the body will also have quite definite consequences.

Secondly, the mental outlook will be those of Mercury, which puts an emphasis on the need for them to communicate and to have an intellectual side to their life, and they may 'talk' with their hands. There could be a risk of nervous burnout if there is a lack of sleep and not enough attention given to the feeding of the nerves. This could be evident in the mind flitting from topic to topic or having problems with concentration.

Thirdly, the spiritual attitude is reflected in the qualities of Uranus, so that they will be open to new and innovative belief systems, particularly ones that appeal to their humanitarian instincts, but may need to watch out for changing their attitude when a new idea comes along without testing it adequately for its practicality. Freedom to believe what they want without adherence to dogma will be important for them.

Finally, the overall number of 5 is represented by Jupiter, inclining the overall personality to be expansive, politically active, generous, and able to make the most of opportunities that come along. Their energies could be constructively used with self confidence or dissipated by taking too much for granted.

To get a quick check on what may be affecting this person at the moment before drawing up their chart, a look at what is happening with these four transiting planets at the moment will give some indication of what is likely to be upper most in their lives. Aspects between the transiting planets should be taken into account as well as their stage in their retrograde cycle. This system can give an immediate insight into the likely cause of physical health problems by taking into account the physical and overall vibrations.

Once the Natal Chart has been correctly compiled very often it appears that there is an emphasis on these planets in some way, and by checking to see whether this emphasis is beneficial or otherwise another layer of understanding can be gained into this person's makeup. This is a system that is worth checking out by looking at your own birth numbers and comparing what you find with your chart, and from there on others whose data you are fortunate enough to have.
