Prologue

This essay and website are developed based on sciences and humanity concerns adopted from religions basis, it means religions which have supported 10,000 years human civilization till coming this millenium time, yet we're still searching a life meaning of that. It would be great life reality that the words of human future have only one dialogue meaning remained, that's the humanity sciences and all aspect of humanity concerns which are developed powerfully by colorful religions as basic needs of human spirituality. It is gracious life time when human would achieve to explore technology like cloning genetic technology, planetary space missions, astonishing global information technology, and also shadows of self-destruction technology by nuke, it is all branches of human evolution and revolution in searching meaning of self-conscious universe which are basically similar when the past of religions messengers convey religions supporting our civilization. Religions foundations will eternally be planted as main spirituality cores in our civilization, even '[West sciences celebrities](#)' have succesfully '[divorced religions](#)' from sciences with tool of '[absolute borderline of scientific method](#)'. Like a peanut forgot his skin, classifying religions as unscientific agenda are civilization mistakes which we have to revisit, because religions are sciences in scope of humanity sciences which we have to explore, enhance and playing tunes with science progress. It's so tough challanges when sciences try to understand DNA from its origins of carbonic compounds and the life theory, it's so terrible when sciences effort to understand beyond of 13.7 bya universe vastness, it's a bitter pill when we're just conscious that our civilization have only a tiny of 10,000 years to challange huge numbers of 13,700,000,000 years time-table, it's all equal balance in discovering humanity cloaks in religions spirituality and science truthness. It's universal humanism which would enlighten that the world now are still dominated by imperialism and colonialism monsters which using mis-guided natural selection theory, hedonistic materialism, maintaining civilization clash theory in religions and races by using global electronic news media. We hope someday human would resolve and choose a shining truthness that universal humanity have the only one meaning, it is one humanity remained in OneEarth.

Mohamad SM

The theory of universe consciousness

Observation 1 : Great silence of Universe

It must be the most phenomenal of human existence in universe since we try to look back at starting point from stone age when the past time a group of cavemen begin to make a fire till we live here on Earth in this gracious millenium time witnessing a conscious universe through a mysterious time-table of 13.7 bya. Human consciousness like a shining vector created for enlighten for universe from its horrible dumb and silence, it means that someone must speak out for universe chronology but perhaps we do only a mind journey.

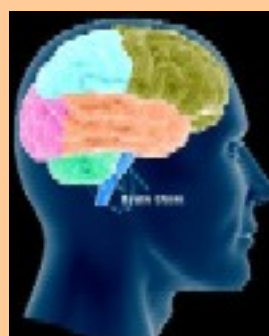

We may think that space-time and mass-energy will be represented as directional vectors if we start to think all of origins, why space-time

must exist, why we have to feel effects of mass-energy, why we have to sequence in chronology from its origins till a Big Bang. Let's say our consciousness is one of vector in universe, a directional willpower unit. Similar with baryon/nucleon evolution which produce billion of stars light up universe with '[their candle light](#)' (universe consist of 70% dark energy), so a self-conscious universe is like '[conscious flashlight vector](#)' will shining universe functionally through space time journey.

Let we know why a caveman initially must need a fire, I think a group of cavemen will be afraid in darkness during night time, so logically firstly they think how to make their surroundings are always visible. They will learn from their nature showing process of a fire sources, they will learn from a dry forest burnt till they invent a firestone technique. Human will learn continuously from a basic simple problem till a very complicated problem then he will make it simply again keeping easy in memory. While a chimp will never learn how to make a fire although chimp species have longer evolution time rather than human evolution from their origin of primate, because chimp have no fragments of self-consciousness like human.

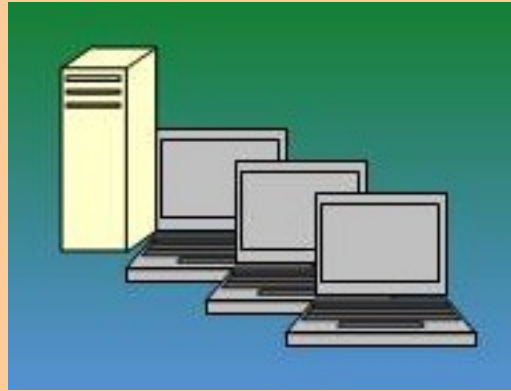

[Observation 2 : Mysterious audio/video formats in 200 billion neurons](#)

Human consciousness must be great spectacle, imagine huge numbers neuron cells of 100-200 billions. Sometime we think that it's so easy downloading thousands of jpeg images from a computer, but try to imagine how to download '[jpeg images of consciousness](#)' in our 200 billion neuron cells or perhaps our '[video images in our brain](#)' which someday we're able to transfer by using USB port to our computer. Where do we have to locate the sensor, the transducer, the video/image signal, what is it the format. How can we explain this brain engine working perfectly to make all images straightly from its upside down images on retina (through eye lens) with no genetic mistakes, we do not have eyes illness with case of upside down image caused by brain malfunction. That's future questions for all scientists in this world.

[Observation 3 : In the cock-pit room of space-time-mass-energy explorer ship](#)

It comes a conscious universe light up all dimensions of space-time and mass-energy like a flashlight which we use when we do walking night time, lighting up our journey to a place, so logically universe also need a tool for lighting up its journey. We define it a '[consciousness vector](#)' which have functions of future plan purposes of '[the eternal universe engine](#)'. Universe consciousness room is like in '[cock-pit room of space-time-mass-energy explorer ship](#)' exploring universe journey, human and life are the passengers following the journey. Guess, who is the Pilot Captain and also the Creator of the space-ship?

Observation 4 : Morphology of networking computers with the server

Communication between one individual conscious human with its universe consciousness could be described like communication one computer which is connected online in networking with its server. When a human born and lived, so a computer has online communication with the server. Imagine if our consciousness in each 200 billion neurons are share-networked in communication with its server in other dimensions format. For example if human needs only 30% for body-mind process and 70% of total neurons are used another party in universe consciousness tunes. People say human self-consciousness like a 'wayang' which is characterized and played by 'Sang Dalang'.

Observation 5 : Immortality and improbable star-galactic journey

Although an atheist rejected God existence, it's actually his expression playing in part of consciousness process in huge numbers of our each 200 billion neurons. That's the game we have to play it while all cases are absolutely limited by mortality phenomena for every life creatures. From this formidable mortality, humans are always questioning immortality dreams. Humans may have a future dream of immortality with genetic technology, but it is most question and most paradox of the human consciousness it self, Earth have more 6 billion humans population, but why we still have OneEarth in Universe.

Immortality also are limited solutions in considering for space journey, even nearest star Alpha Centauri which we could estimate need more than 10,000 years journey, but what is it meant of 100 years, 1000 years and more of space journey for us without free oxygen. Can we imagine our civilization beyond 10,000 years on Earth, if we still have only OneEarth. That's why I always question words of humanity remained in OneEarth, perhaps we do only a mind journey in all aspect of complicated universe meaning as if we do physical journey in life on Earth.

In effort understanding beyond of 13.7 bya meaning

Observation 6 : Revisiting null definition of 13.7 bya figure

If we try to question what's meaning beyond distance of 13.7 billion light years of our observable universe, so as we're observers we can not define it, because we agree on that there is no space beyond 13.7 bya distances. Perhaps similar morphology in our self-consciousness in math when we try to operate 1 divided by 0(zero), we define it nothing or meaningless. It's so strange and absurd for our body-mind

perception which have always sense continuously of spatial consciousness, perhaps our body-mind was created based on volumetric space consciousness, it means our body-mind have always [reference of 3-dimensions](#) length (L), Width (W), and Height (H) or Depth (D).

[Observation 7 : A conception of mind journey in universe consciousness](#)

A mind journey conception could be considered from huge numbers comparison of universe time-table(U) and life evolution time-table(D) compared to our civilization time-table of 10,000 years as described in illustration below :

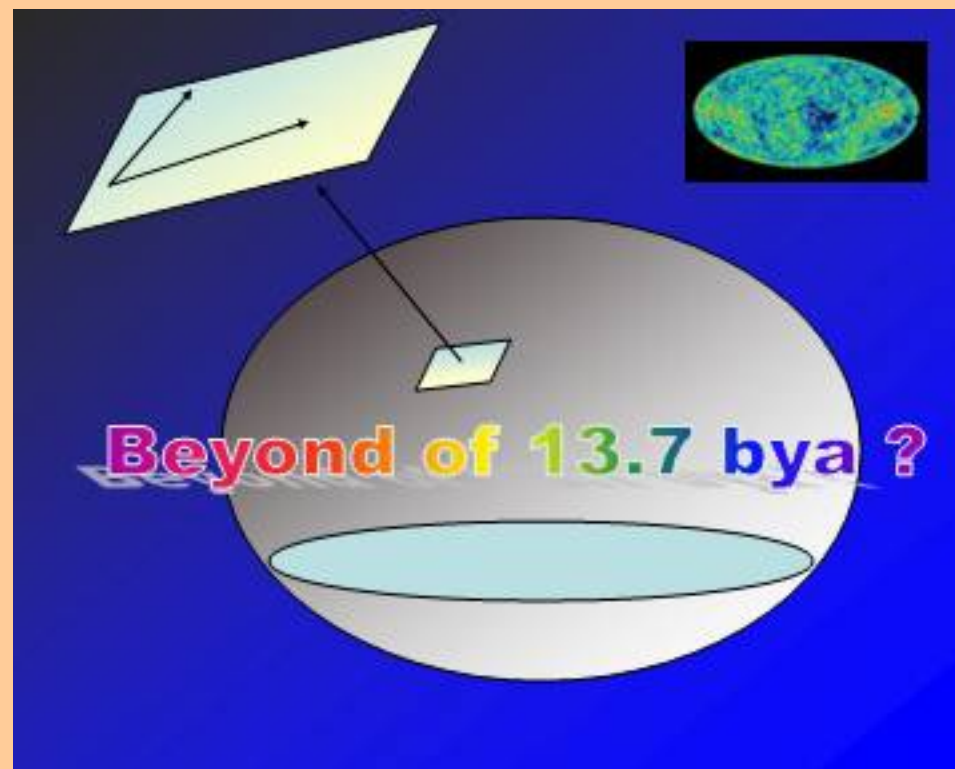

[Observation 8 : 2-dimension space non Euclidean](#)

But probably humans essentially have a part of consciousness working based on 2-dimension, I mean our self-consciousness have relationship with universe consciousness which is working in 2-dimension. The 2-dimension is not meant of length and width but it is related with the original dimensions of space-time(1st vector) and mass-energy (2nd vector). Our self-consciousness dimension finally will be '[online in networking](#)' with universe consciousness looking future fate of universe.

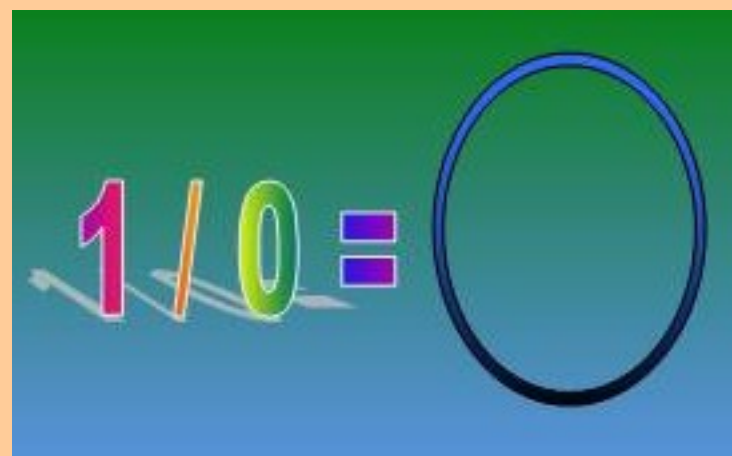

Probably our self-consciousness is not located in our '[galaxy of 200 billion neurons](#)' but it is located somewhere in universe consciousness dimensions. Universe consciousness function of 200 billion neurons can be described like electrical transformer which transforming function [current, voltage, frequency], so our 200 billion neurons are transformer medium which connecting between self-consciousness and universe consciousness.

I propose 2-dimension non-Euclidean could describe 2-dimension vectors of space-time(1st vector) and mass-energy (2nd vector) which is universe consciousness working in this 2-dimension. My office room surface here is 2-dimension vector of length and width, but imagine if this room surface expand continuously all over surface on Earth, so as we're an observer looking that 2-dimension vector expansion is infinite continuously on that non-Euclidean surface. If our 2-dimension self-consciousness working on 2-dimension non-Euclidean of universe consciousness, we're an observer possibly look that figure of 13.7 bya distance is an infinity unit of universe. It means we do a mind journey in 2-dimension non Euclidean on figure of 13.7 bya, and we do conclusion that the figure of 13.7 bya is an infinity unit of universe. Perhaps the curving 2-dimension vector would simplify our understandings of eternity meaning.

Observation 9 : 1 divided 0(zero) = 'Big Zero'

Similar explanation is in operation of 1 divided by 0(zero). The result is infinity which is describe like vector of '1' encircling a circle continuously .So infinity meaning describe a condition of 'big zero'.

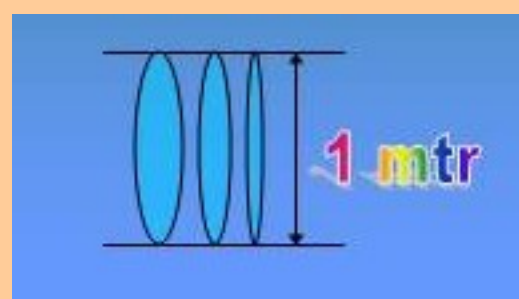

Observation 10 : Singularity of space-time and mass-energy

Logically the 2-dimension vectors are resultants of the follows :

1. vectors space and time reunite in 1 vector space-time
2. vectors mass and energy reunite in 1 vector mass-energy,

which moving on surface space of 2-dimension non Euclidean. It means singularity process(reunite space-time and mass-energy), but it also need addition of arrow-head being a conscious vector, so it is a conscious singularity process.

Example No. 1 : Assume our consciousness is a vector moving in a discontinue line of 1 meter. Is it possible the line of 1 meter have meaning a continuous line?

Answer No. 1 : Our conscious vector actually able to interpret a line of 1 meter as a continous line infinitely, if our conciousness look the

line as a circle line and our conscious vector moving in this circle infinitely.

Example No. 2 : If the Creator have created hundred billions solar system in universe , why the author of Mohamad SM is so stupid to conclude that Earth is only one and remained one in universe?

Answer No. 2 :

- We may apply 'magic mirror' of Aristotle syllogism. How much baryon chains (proton+neutron) have ever produced in universe, it's about $10^{\exp(+79)}$ baryon/nukleon but life on Earth have produced DNA chains comparable with baryon numbers, let's say $10^{\exp(+33)}$ DNA chains have driving evolution engine creating a life spectacle on Earth. My body itself have DNA chains of $30^{\exp(+12)} \cdot 3^{\exp(+9)}$, you may try to count all DNA chains have ever created for all life creatures of animals and plants. Most agenda in universe is a mind journey, it was successfully created on Earth through life evolution, human coming is witnessing the agenda, and the other party will close the agenda.
- Perception saying that no space beyond 13.7 bya is human perception in 3-dimension observation. But human self-consciousness finally able to look that figure of 13.7 bya is eternity unit of universe completion. One universe, one mind journey and finally OneEarth in God Mind.

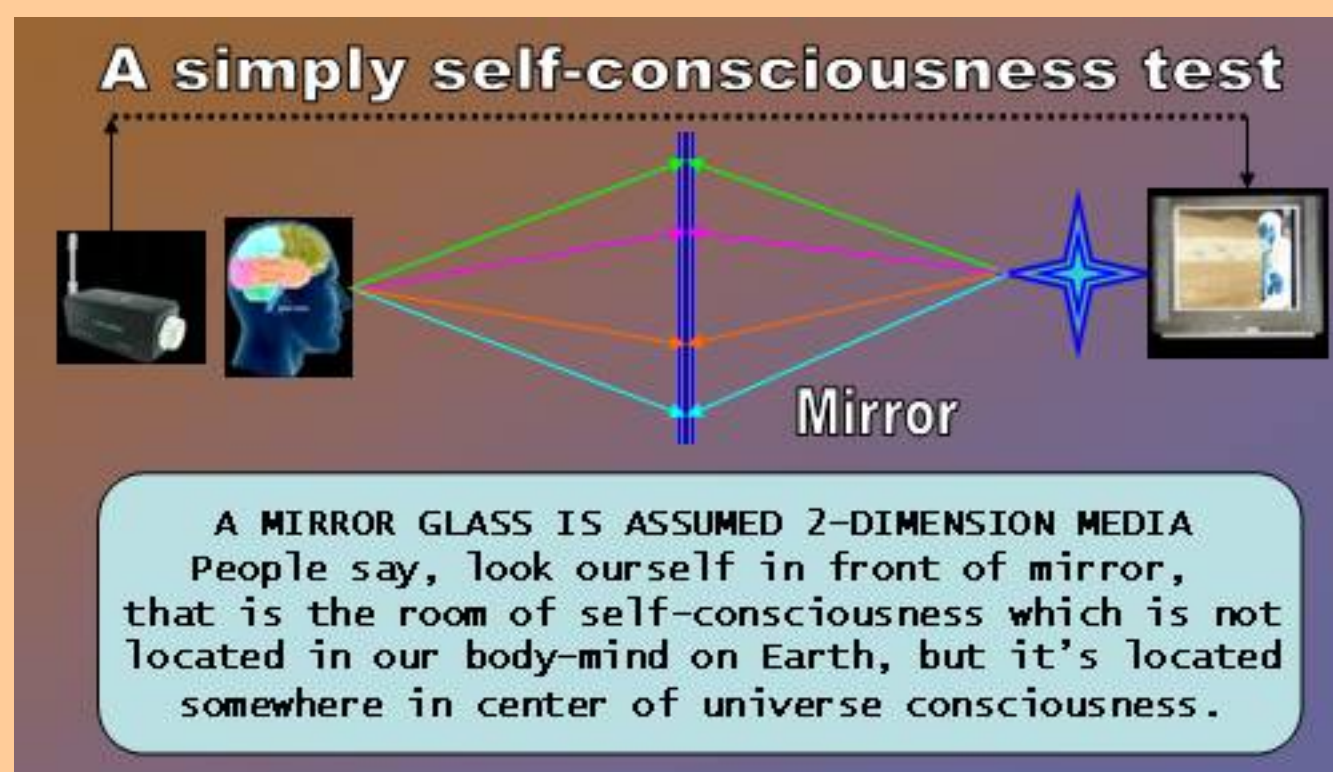

Example No. 3 : Maybe readers question how God execute final agenda, the closing date of universe in very short time execution, let's say He will execute in $10^{\exp(-100)}$ second to close universe agenda, 'The Day After'.

Answer No. 3 : Use again magic mirror of Aristotle syllogism. For example, destruction of 100 levels of high rise building is so easy to be executed by bombs but the construction needs accurate design and time-table. Secondly human massacre with nuke bombing is in minutes and it is most fast time for genocide technique in our civilization and now 10-20 million simultant death is possible in faster time by using accurate nuke ICBMs guided by satellite. But the paradox how to create a tiny of amoeba from nothingness(organic compounds) is beyond of our understandings. So if we suddenly learn from a book that we're coming from darkness a cave, this is a life reality, not a dream.

Could we possible watching 2-dimension self-consciousness in our daily reality?

Observation 11 : Mysterious location of the mirror image and Aristotle syllogism

How could we know that our spatial volumetric consciousness actually watching 2-dimension self-consciousness in daily reality?. A mirror is assumed 2-dimension media, it is only human understand himself in front of a mirror (initially a silent pond used a mirror in ancient time), probably there is a direct relation between self-consciousness and universe consciousness which is experienced in 2-dimension mirror. People say, look ourself in front of mirror, that is the room of self-consciousness which is not located in our body-mind on Earth, but the room dimension of our self-consciousness may be assumed in 2-dimension non Euclidean. It is simply say that our self-consciousness is located at center of universe consciousness. Actually we must aware that our life in civilization have a reality of a short-time, so we must appreciate our life based on this figure of 10,000 years, so science could explain more balance between humanity reality and science achievement.

Observation 12 : Mysterious consciousness rivers back-flow to horizon of universe consciousness

Another example from nature on Earth is river water which flowing from mountain back to ocean encircling on Earth. River water drift is assumed 2-dimension vectors and ocean is assumed a 2-dimension surface non-Euclidean, so river water vectors are flowing and encircling all surface on Earth infinitely. Probably with similar logic, our self-consciousness flows finally are going back to the ocean horizon of universe consciousness infinitely.

So in table below, I try to imagine the back-flow process of universe consciousness. It was started from a group cavemen learn how to make a fire, 10,000 years human civilization with self-consciousness and universe consciousness, human try to reconstruct imagination of DNA evolution in 4.5 bya and human try to reconstruct imagination of baryon evolution in 13.7-4.5 = 9.2 bya, and finally human question : "How can we imagine a Big Bang?".

TABLE : UNIVERSE CONSCIOUSNESS FLOW-LINE

BARYONIC EVOLUTION PHASE TIME S S S S S S S S							DNA EVOLUTION PHASE TIME S S S S S S S S

H H H H H UNIVERSE CONSCIOUSNESS BACKFLOW H H H H H								

SUMMARY

- Most agenda in universe is a mind journey, it was successfully created on Earth through life evolution, next human coming is witnessing the agenda, and finally 'the other party' will close the agenda.
- Space-time and mass-energy were represented as vectors when we do search its origin. Let's assume that our consciousness (a willpower) is one of vector unit in universe, we try to analyze where is the room of self-consciousness dimension playing tunes in universe and where to go finally.
- Universe were originally designed in 2-dimension resultant vectors, 1st is space-time vector and 2nd is mass-energy vector. The vectors are moving on surface of curving 2-dimension space non Euclidean infinitely.
- Human with 200 billion neurons basically senses 3-dimension space of length, width, and height or depth to surveillance the visible object. I try to conjecture that human consciousness tied with self-consciousness able to 'read or communicate' with universe consciousness in 2-dimension media.
- It is actually human perception in 3-dimension observation recognizing no space beyond 13.7 bya. But human self-consciousness invisibly able to look that figure of 13.7 bya is eternity unit of universe completion. It is assumed that human self-consciousness has 2-dimension space non-Euclidean which were playing in tunes with universe consciousness.
- Eternity means that human universe consciousness finally able to look a continuous cycle of the universe fate in the past time or in the future time as one eternity unit.
- In this website, God or God Mind or Gods are referred to something when 'we' point to 'origin of the origin' and we make it as our universal reference in searching the origins of space-time and mass-energy, the origins of great personality characters with the leadership vector in [Mind Journey History](#) on Earth, till finally we question: "Who are we in universe sharing consciousness in each our 200 billion neurons?"
