

As a former A+ student at Columbus State Community College, we know that you are interested in the latest offerings in computer training and certification. That's why we are writing to let you know about the new **Network+** and **Windows 2000 MCSE** courses at Columbus State starting September 22.

Network+ upgrades your A+ skills with additional knowledge about client/server networks, TCP/IP, network topologies, and hands-on client configuration. It provides valuable practical and theoretical knowledge about networking to help you boost your career, and prepares you to pass CompTIA's Network+ exam.

The **Windows 2000 MCSE** program is designed to teach you the essentials of Microsoft's new and innovative client/server operating system, Windows 2000. Industry experts predict an explosion of interest in Windows 2000 as companies upgrade their systems. You can be prepared for these new opportunities by enrolling in our MCSE program, which will enable you to earn your MCSE in just 8 months.

Find out more about these new classes by visiting our new certification web site at **<http://www.csc.edu/docs/Workforce/BandI.htm>**. You can also call our office at **287-5000**, or email **cert@csc.edu**. Or feel free to attend our next public information session on August 29, at 7pm in Nestor Hall Seminar Room B.

We look forward to seeing you!

Sincerely yours,

Aaron Minnick, Coordinator of Technical Programs
