

antennae

A pair of these organs on the head of insects that can be used to touch and smell:

cocoons

silky covering made by some insects to protect themselves until fully grown.

colony

a group of animals, plants, or people living or growing together.

fungus

a group of living things that are not plants or animals and have no flowers, leaves or green coloring.

larvae

newly hatched insects
that have no wings and
look like worms.

tunnels

underground or
underwater
passageway.
