

## XRAY OF A CROSS SECTION OF THE DNA MOLECULE

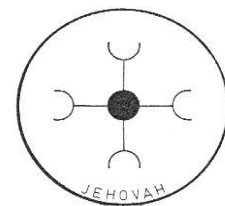

Alison Maciver

I came across this in May, 1990. This seemed to be another piece in the jigsaw. If we compare this picture with the Cross of Jehovah, which is included here, the similarities are striking. The cross with equal arms within a circle has been worshipped and utilised for centuries, and now it appears that by venerating this ancient and powerful symbol, mankind has actually been giving due credence and honour for a symbol representing the very basis of life here on earth. Whether it is also the basis of life in other dimensions we are yet to find out for sure.

The cross within a circle making four sectors has been used as a basis for astrology for centuries. This is simply turned on its axis three times to make twelve sectors. In physics all particles are composed of the same set of four quarks in their three modes ( $4 \times 3 = 12$ ) and the genetic code uses the four acid bases in their three forms ( $4 \times 3 = 12$ ).

Whichever way this symbol or diagram is turned, it still remains the same, and so it cannot be misused, as unfortunately can other symbols. To meditate upon this symbol, the very essence of life, may bring us more quickly into harmony with the universe and our creator.
