

HIDDEN CONCEPT USING MYSQLI New version PHP CODE :

(1)FIRST CREATE TABLE:

```
Create table record
(id int,
name varchar(20),
email varchar(20),
password varchar(20)
);
```

(2)Insert record into table for example :

```
insert record into (id,name,email,password)values('1','om','om@gmail.com','@1234');
```

first of write code for database connectivity file name connect.php:

```
<?php

$con =mysqli_connect("localhost","root","","prakash");
if($con)
{
    echo "connected";
}
else
{
    echo "not connected";
}
?>
```

(1)write code for display.php file:

```
<?php

$con =mysqli_connect("localhost","root","","prakash");//database connectivity

$sql = "select * from hidden"; //select all record from table hideen

$result = mysqli_query($con,$sql); //exceute sql

        echo '<table class="prakash">
        <tr>
<th>id</th><th>name</th><th>email</th><th>password</th><th>&nbsp;</th><th>&nbsp;</th></tr></tr>';

        while($row=mysqli_fetch_array($result)) //reading table record using
mysqli_fetch_array()
        {

            echo '<tr>';
                echo '<td>';
```

```

        echo $row['id']; //display id value from column id
        echo '</td>';
        echo '<td>';
        echo $row['name']; //display name value from column name
        echo '</td>';
        echo '<td>';
        echo $row["email"]; //display email value from column email
        echo '</td>';
        echo '<td>';
        echo $row["password"]; //display password value from column password
        echo '</td>';

        echo '<td> <form action="update.php" method="post">

                <input type="hidden" name="hidden" value="'. $row['id']. "'>

                <input type="submit" name="button" value="update">
        </form></td>';
        echo '<td> <form action="delete.php" method="post">

                <input type="hidden" name="hidden" value="'. $row['id']. "'>

                <input type="submit" name="button" value="delete">
        </form></td>';

        echo '</tr>';

    }

    echo '</table>';
?>

```

(2) write code for update.php file :

```

<?php
$hiddenid=$_POST["hidden"]; //getting id from hidden element from display.php
include('connect.php');

$sql = "select * from hidden where id='$hiddenid'";

$result = mysqli_query($con,$sql);

while($row=mysqli_fetch_array($result))
{
    echo '<form action="finalupdate.php" method="post">
    id <input type="text" name="id" value="'. $row['id']. "'>
    Name <input type="text" name="name" value="'. $row['name']. "'>
    email <input type="text" name="email" value="'. $row['email']. "'>
    password<input type="text" name="password" value="'. $row['password']. "'>

    <input type="hidden" name="hidden" value="'. $row['id']. "'>

```

```
<input type="submit" value="update" name="update">
</form>;
```

```
}
?>
```

(3)write code for finalupdate.php file :

```
<?php

$hiddenid=$_POST["hidden"];
$name=$_POST["name"];
$email=$_POST["email"];
$password=$_POST["password"];
include('connect.php');

        $sql="update hidden set name='$name', email='$email',password='$password' where
id='$hiddenid'";
        $res=mysqli_query($con,$sql);
        if($res)
        {

                echo"record updated successfully";

        }
        else
        {
                echo "record not updated";
        }
?>
```

(4)write code for delete.php file:

```
<?php

include('connect.php'); //it ll include all code of connect.php

$hiddenid=$_POST['hidden']; // value from display.php

$sql="delete from hidden where id='$hiddenid'";

$res=mysqli_query($con,$sql); //go and execute delete sql command
if ($res)
{
echo "deleted";
}
else
{
echo "not deleted";
}
}
```

?>
