

Step 1:- urls.py file code in your app folder :-

```
from django.urls import path

from . import views

urlpatterns=[
path('',views.index,name='index'),
path('editemp/<int:id>', views.editemp, name='editemp'),
path('updateemp/<str:course>', views.updateemp, name='updateemp'),

]
```

Step 2:- views.py file code in your app folder:-

```
from django.shortcuts import render

def index(request):

    return render(request, "home.html")

def editemp(request,id):
    data={'id':id}
    return render(request, "edit.html",data)

def updateemp(request,course):
    data={'course':course}
    return render(request, "update.html",data)
```

step 3 :- Create edit.html file in your templates fodler.

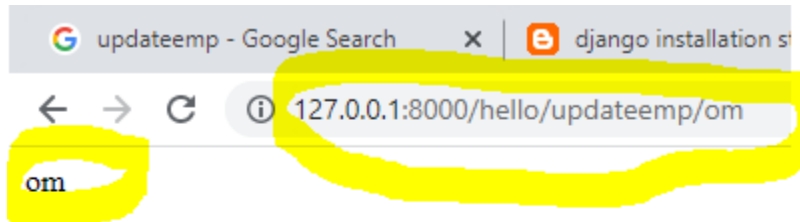

```
{{id}}
```

Step 4:-

Create update.html file in your templates fodler.

{{course}}

And then run `python manage.py runserver` in your command prompt or in terminal

And to check editemp url with id
