

## React Form Example:-

Enter your name:  Enter your age:

```
import { useState } from 'react';

function MyForm() {
  const [inputs, setInputs] = useState({});

  const handleChange = (event) => {
    const name = event.target.name;
    const value = event.target.value;
    setInputs(values => ({...values, [name]: value}))
  }

  const handleSubmit = (event) => {
    event.preventDefault();
    alert(inputs.username+inputs.age);
  }

  return (
    <form onSubmit={handleSubmit}>
      <label>Enter your name:
      <input
        type="text"
        name="username"
        value={inputs.username || ""}
        onChange={handleChange}
      />
    </label>
    <label>Enter your age:
      <input
        type="number"
        name="age"
        value={inputs.age || ""}
        onChange={handleChange}
      />
    </label>
    <input type="submit" />
  </form>
  )
}
```

```
export default MyForm
```

#### App.js file Code :-

```
import logo from './logo.svg';
import './App.css';
import MyForm from './Form';

function App() {
  const myArray = ['apple', 'banana', 'orange'];
  return (

<div className="main">

{myArray.map((item) => <p>{item}</p>)}

      <MyForm/>
    </div>
  );
}

export default App;
```
