

RSI Indicator Strategy:-

The Relative Strength Index (RSI), developed by J. Welles Wilder, is a momentum oscillator that measures the speed and change of price movements.

The RSI oscillates between zero and 100.

Traditionally the RSI is considered overbought when above 70 and oversold when below 30.

RSI can also be used to identify the General Trend.

Uptrend Range = 40 to 80

Strong Uptrend Range = 60 to 80 (**Strong Buy Signal**)

Down Trend = 60 to 20

Strong Down Trend = 40 to 20 (**Strong Sell Signal**)

For example see below Chart :-

Macd Crossover Strategy on Live Chart :-

Blue line is Macd and Red line is Signal line

- **Buy signal:** - When the MACD line crosses from below to above the signal line, the indicator is considered bullish. The further below the zero line the stronger the signal.
- **Sell signal:** - When the MACD line crosses from above to below the signal line, the indicator is considered bearish. The further above the zero line the stronger the signal.

Note:- How this indicator works

- MACD crossing above zero is considered bullish, while crossing below zero is bearish. Secondly,
- when MACD turns up from below zero it is considered bullish.
- When it turns down from above zero it is considered bearish.
