The figures in the centre columns can be read as either Metric or US Measurement system, for example, 1 inch = 25.4 millimetres and 1 millimetre = 0.03937 inch.									TEMPERATURE		To convert values to units in the given order, simply multiply the quantity by conversion factor. For example, to convert 250 lb. into grams, multiply 250 by the factor (453.6) and you get 113400 g. To convert values to units in the reverse order, first invert the factor, that is, 1 ÷ (factor), then multiply quantity by inverted conversion factor, as above.

INTERNATIONAL DIALLING CODES

Before dialling an overseas number direct, write down the international code for the country, the area code for the town or city and the subscriber's number. Dial digits without pausing between them — and remember that up to twenty seconds may elapse before you hear the "ringing" or "engaged" tone. Also remember that in some countries, the "ringing tone" sounds much like our "number-engaged" tone whereas the "engaged" tone is often a short signal rapidly repeated.
