

Rough Stone Text

This is a simple tutorial that will show you how to make text that looks like it has been chipped from stone. You will need version 7 of Paint Shop Pro to complete this tutorial as it uses effects not found in earlier versions.

ROUGH STONE

PSP version and tools used

Paint Shop Pro 7, Download 30 trial version [here](#).

Text Tool

Sandstone

Fur

Inner bevel

My presets for sandstone and Inner Bevel, download the zip file [here](#). Unzip the presets into your Jasc PSP7 presets folder. This folder should be located in your C drive within the program files directory.

Fonts with fat letters will work best for this tutorial, I used "Signboard" for this tutorial.

Step 1: In your styles palette, set your foreground color to null and your background color to #808080. Open up a new image, transparent background, 500w x 300h. (I always start big.)

Step 2: Go to your text tool, select a fat font and type in whatever tickles your fancy. For the Signboard font I set my text size to 50. Choose the floating option. For the next several steps, you need to keep the text floating. If you need to move your text to center it, just use the mover tool.

Step 3: Go to Effects, Texture Effects, Fur and use the settings as shown below.

Step 4: Go to Effects, Texture Effects, Sandstone. In the presets drop down menu, look for mfa_roughstone and click ok.

Step 5: Go to Effects, 3D Effects, Inner Bevel. In presets drop down menu, look for mfa_roughstone and click ok. You can now either promote your text to a new layer or de-float it. I added a drop shadow to make it stand out on these pages a little better.
