

# STERLING

## THE SILENT STERLING

(Sterling Patchett Sub Machine Gun 9 mm Mark 5 - L34A1)

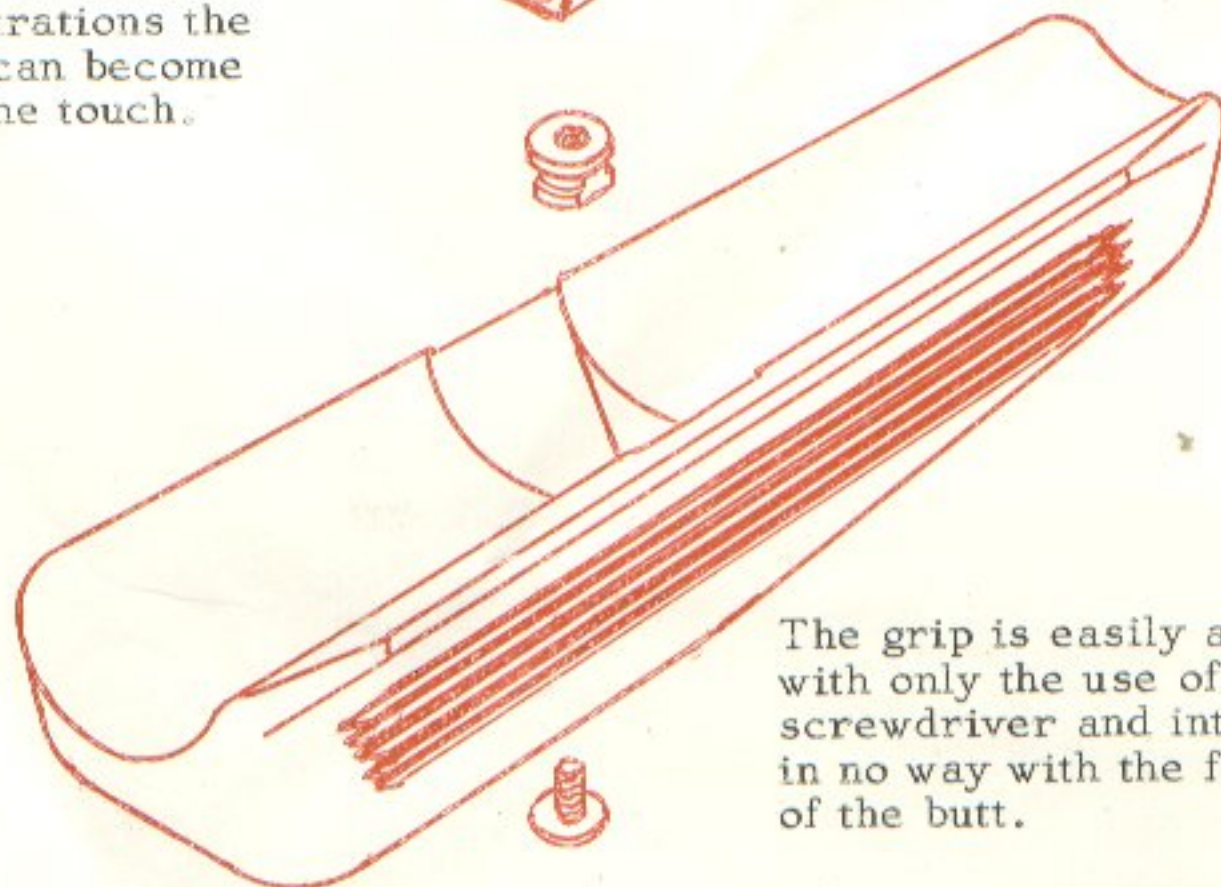

### FORE HAND GRIP

The Silent Sterling was designed to meet a requirement for a fully silent and very accurate weapon which would normally be used in "single shot". Under these conditions, heating of the external casing is not a problem that arises. However, under training sessions and demonstrations the casing can become hot to the touch.

Sterling have therefore developed a fore hand grip in quality hardwood to cope with these conditions. It enhances the appearance of the weapon and makes for even greater accuracy in both prone and "off hand" shooting owing to the increased comfort of the grip, which is ribbed and finished with an attractive and preservative finish.

The grip is easily attached with only the use of a screwdriver and interferes in no way with the folding of the butt.
