Quarterly Newsletter - Volume 1 Issue 1

What's the big deal?

Since 1998 Steve Covey, President and CEO of Medical Equipment Refinishing Systems, Inc., has been repairing and refinishing linear accelerators, CT scanners, and a variety of other large medical equipment. The idea first came around when Dr. Alan Porter of Sarasota Radiation Oncology Center inquired if there was any possible way to refurbish the equipment in his office. Steve answered, "If it will sit still long enough I can paint it."

After 10 years of experience our company has developed and patented a portable spray booth that can be setup inside the treatment room. The booth is sealed which contains the dust and strong fumes of the paint, this prevents patients from inhaling these toxic fumes. Easily removed panels are taken and prepped outside the facility and then painted in the on-site trailer. The permanent fixtures are painted in place with the patented spray booth.

"...look forward to working with you in the future..."

Our weekend work option has also allowed many offices and hospitals to continue treating patients without disrupting weekly treatment schedules. We are able to arrive and disassemble the equipment Friday after office hours and work though the weekend, by finishing Sunday night. Allowing the

first patient to receive treatment first thing Monday morning has been beneficial to both the office and the patients.

What do the people think?

“Our equipment now looks better than when it was new... The therapists in our facility appreciate working with the “new” equipment and have received many positive comments from our patients... I commend your team and look forward to working with you in the future on our other treatment units and simulators.”
