

# Involvement

I shall start this small article with one saying “if you are not part of problem become part of the solution”. I do not know who said this or when and where it is said, but this is main thing I am going to talk about here.

Every body whom I know will like to talk about problems be it of any kind, say for example law and order, poverty, hunger, wars, quality of life etc, etc. In this place or anywhere in this world. And most of us are very eager to provide the lip service to state the causes in order to project the problems. I have yet to see any problem is solved by it self, by providing lip service or just by a magic touch of some super natural powers.

If we look deep into any problem, we will sure find that every one of us in this universe is responsible to a smaller degree or some places a larger degree of each and every problem. Let us take Hunger for example, we who are living in affluent societies waste so much food on daily basis, where as many go hungry or die every day in this Universe. And very conveniently we will blame God for the same or every body else, but not ready to invest some of our time and resources for solving the problem.

My point here is only this if every one of us get involved in a very small way the problems will get solved in a big way. I am fully aware that everyone cannot get involved in every single problem, but can choose one whichever he or she liked and close to their hearts, hence please get involved. As sea is made of very small drops but each, and every one of them is counts. By getting involved every body will not become as good and famous as mother Teresa, but self satisfaction you get is your best reward and that will keep you going a long way. Don't be indifferent to problems these will eventually haunt us, as society.

Recently I was watching a funeral ceremony of some famous person on TV Some comments I like and wants to add here “Every one of us was sent to this earth by God with a mission and we have to fulfill that”. Hence god has sent each one of us with a very small part to play in solving the so many problems and we should not disappoint him.
