

SAPNA (Dream)

Dear friends

Thanks a lot for putting up with us, but unfortunately we will be leaving for India on 25th July and 16th we shall be Philadelphia. I have outlined some more thought on the Issue. And Feel strongly some how we should link our Industrial progress to our village progress than things will improve. I have SAPNA (Service And Planning a National Alternative). - VAST (Village Adoption Service Trust) In nature, but still it can be achieved.

Simply If you can plan a successful venture Using our National resources for profit, Do the same thing for less fortune Villagers, by providing them the basic necessities as and what they need and Govt. cannot provide them and at the same time we cannot wait indefinitely for govt. to do this for our own brothers and sisters.

What is the biggest failure of our National leaders and Government is not able to distribute our national resources properly so every body who has equal chance in education, has equal chance in succeeding in life equally.

Take example of education, drinking water, and health services communication or even environment.

Next question how it can be done. There can be numerous committees can be appointed and we can come to an ideal solution or in my humble way: e.g.

If you have a company start up capital of 10 crores have 10 lakhs to be spent in Govt. authorized schemes for a village for five Year only.

Identify the poorest 10 families who should directly benefit from it of the village, and at the same time builds the infrastructure for the village, like school, multipurpose hall, primary health care unit, craft schools for adult's etc.

Give a catchy Name Gaon God Yojana pronounced in Hindi written in roman.

Basic intent behind is not that you have to trust multi national or big Companies will certainly do a good job in this sphere as they can in earning the money. Provided Government is ready to monitor and enforce the law of lands, through Gram Panchayats, Decentralize the central Govt. by empowering local bodies, rather than tell people how to break the laws.

Same way we as outside agencies Like AID can adopt a village two or Ten Village depending on our resources. Why I said adopt village only for 5 years (or 7 years) is otherwise we make them dependent on outside supports.

If we can be successful in Making Atom Bomb, Atomic power plant or rockets, there is no way we cannot improve cleanliness and other basic requirements of our brothers and sisters, and children living in village. What a shame we are wasting our national resources like of our 40% of our population below poverty or unproductive? Think about how many other avenues it will open for every rich Indians to become more rich as these people will have more purchasing power, more market, products, and services to serve them.

Now let have simple Arithmetic if we Have 10,000 or so big companies in India now and we have a projection of 8% growth in next 5 years we can help 14000 new villages. May be in next 25 years we will have 108,000 villages developed, and in next 25 years we will achieve all villages developed with all basic requirements.

What happened to 20 Sutri Krayakram where each family should hold one govt. jobs?

Jai Hind
