

Harvesting the Zeros

How then did the world come to have duplicity in the first place? Children learn it from their parents and so on, but where did it begin? Did early man have these problems?

The Bible says it all began in the Garden of Eden with Adam and Eve tasting the apple, at the snake's behest. Let it be said in their defense, it was a snake whose appearance wasn't against God's will. Did God set them up for a fall? Was it an essential part of human evolution that we all went through this duplicitous phase before moving on?

We may never know fully what happened in the Garden of Eden. All we know for sure is that negativity entered the world, the sky darkened, and suddenly Adam and Eve didn't have it made anymore.

The System Itself

Harvesting the Zeros, like Trilogy, isn't a practical system and is offered here more as a mathematical curiosity, the natural endpoint of the evolution begun in Two-Step and continued in Trilogy. If you're actually out to hedge a roulette wheel, use

the system in chapter 25, "The Red-and-Black Hedge." That much said, however, let's consider Harvesting the Zeros.

Mathematical Analysis

A comparison of tables 11.1 and 12.1 serves to illustrate the buffering effect that Harvesting the Zeros has. In table 11.1, the Trilogy game, the extremes of profit run from a low of -\$222 in deficit to a high of \$78 profit, a \$300 range, while in table 12.1, below, the Harvesting the Zeros game, the extremes go from a low of -\$31 in deficit to a high of \$105 profit, a \$136 range, less than half as extreme as the range in the Trilogy game.

Table 12.1
Harvesting the Zeros

| 77 | \$9 | | \$15 | | \$12 | W | \$2,371 | \$2,450 | \$79 |

To understand all this, and why zero harvesting works the way it does, let's take a look at the numbers.

A Trilogy game consists of three simultaneous games of Two-Step. If each Two-Step game produces a theoretical profit of \$1 (or one unit) on every turn of the wheel, then a Trilogy game produces a theoretical profit of \$3 (or three units) on every turn of the wheel. The essence of zero harvesting is to forgo \$2 of that \$3 profit and spend the \$2 instead, placing \$1 bets each on zero and double zero. This way the Trilogy part of the game is theoretically earning only \$1 on each turn of the wheel but it's making it possible for you to bet zero and double-zero *for free* on every turn of the wheel. Thus you're eligible to get a beautiful 35-to-1 payoff every time either a zero or a double-zero shows up on the wheel. On average this should be once in every nineteen turns. Fewer than that, you end up losing money. More than that, you end up making a nice profit.

If this sort of hedging should ever get you barred from a casino, you might want to let the press know.

The game charted out in table 12.1 has no extremes of luck either way. It won a mere \$79 and was so solidly hedged it never went more than -\$31 into deficit. The middle column was the theoretical big loser in this example, but in absolute terms it didn't lose anything, it just happened to be \$9 above its starting point when I called it quits.

The middle column would have begun to win eventually had I hung in long enough. In fact, it hadn't even risen far enough up the scale yet to qualify for half peak. It started at \$8, which meant it would have had to go all the way to \$21 to establish \$10.50 or \$11 as a valid half peak.

The other two columns did considerably better. The third column went to a high of \$20, coming to rest ultimately at \$12 on turn No. 77.

A Frank Evaluation

Harvesting the Zeros is a theoretically interesting system, but it's utterly impractical and I wouldn't consider trying to make it work in real life. If you like roulette, I recommend the holistic systems, played invisibly. I'll be getting to them next. Either that or, if you're with a partner, the roulette hedging system in chapter 25, once again, the Red-and-Black Hedge. It's designed to zero in on one of the fundamental weaknesses of the roulette layout, an irregularity in the distribution of colors, a mistake someone made back when roulette was first invented.
