

## **Semester Biology Project**

**To begin this project, you will choose which type of project to complete. Although some class time will be given, you will be responsible for budgeting your time outside of class and finding additional resources.**

**Project A – Your own wildlife TV show!** You will create a video where you will be the wildlife show host covering the characteristics of ONE animal species. I recommend that you choose an organism you know you will be able to tape easily. Your project tape must be at least 5 minutes long and will be shown to the class.

**Project B – PowerPoint presentation!** You will create a slideshow that covers the characteristics for ONE animal phylum or class. Your presentation must include graphics and text. You will present this to the class.

**Project C – PowerPoint presentation!** You will research an assigned topic of animal biology. For example, you can assemble a slideshow to explain various animal defense mechanisms or forms of reproduction. You will present this to the class.

**Project D – An animation!** You will create a computer animation to depict & explain an assigned biology topic. For example, your animation could show what happens during meiosis or how nutrients are transferred through the nitrogen cycle.

**If it is ABSOLUTELY impossible for you to have access to a computer or camera, see me immediately to discuss arrangements for an alternative semester project.**
